PREFACE

This manual is a sample application of the SAS system as a tool for construction of databases and transforming such databases on the grounds of a sample survey, so that they can be used in research descriptions and analyses.

The survey ***“THE EVALUATION OF CHANGES IN ATTITUDES AND REPRODUCTIVE BEHAVIOURS OF YOUNG AND MIDDLE GENERATIONS OF FEMALE AND MALE POLES AND THEIR INFLUENCE ON THE PROCESS OF FAMILY AND HOUSEHOLD FORMATION AND DISSOLUTION - II panel ”*** was carried out in January 2006 by the Institute of Statistics and Demography, Warsaw School of Economics. The field survey implementation was ordered by the Warsaw School of Economics within the framework of a contract by tender to the company **PBS Spółka z o.o.** with the premises in Sopot, 2 Junaków street, registered in the KRS (*National Register of Associations*) with the number 0000189170 . The costs of empirical survey were covered with the research project No. 2H02B 006 25 “ The changes of reproductive behaviours in Poland and their consequences for formation and dissolution of families, relationships and households.” Panel survey II phase financed by the Ministry of Science and Informatization. The first panel was carried out in the third quarter of 2002 by the Institute of Statistics and Demography, Warsaw School of Economics in cooperation with the Central Statistical Office. The current 2006 survey was the forth retrospective survey conducted in Poland (after the ones carried out in years 1988, 1991, 2001)¹ and the second one to be completed after systemic transformation. The study reconstructed the history of four careers of the respondents: educational, occupational, migratory and family. The ranges of social networks, social support, and intergenerational transfers were investigated. The problem of norms, values, attitudes and behaviours was explored in depth, at unprecedented scale. Retrospective surveys of this type serve analysis of phenomena, events and processes based on the concept of family and individual life cycles. A wide range of methods and models within the scope of event history analysis are used. This manual is intended not only to support the user, but it is also meant to serve the broadly understood didactic and educational purposes, which the SAS System has been selected to serve. The experience gathered during the work on the User's Guide for the retrospective surveys 1991 and 2001, has been used while preparing this manual.²

The content includes three sections.

Section I includes general information concerning the objectives, scope and implementation of the survey, and the sampling scheme. This Section is completed with the discussion of the principles and practical construction of weights.

Section II consists of description of primary sets, conversion of data to SAS system, the principles of controlling the data set. It also includes instruction of creating databases under the SAS System and description of their structure. Such a detailed guide may be useful in both, the didactic process and for cleaning up the sets of data from survey, or competent databases creating.

¹ Compare E. Frątczak, *Droga życiowa – biografia rodzinna, zawodowa i migracyjna*, SGPiS, GUS, Warszawa 1989; E. Frątczak, I.Kowalska, G.Rohwer, S.Drobnic, H.P.Blossfeld, *Polish Family and Fertility Survey. A User's Guide*, Warsaw School of Economics – SGH, University of Bremen, Warsaw and Bremen 1996; Frątczak E., M.Pęczkowski, *The Evaluation of Changes in Attitudes and Reproductive Behaviours of Young and Middle Generations Female and Male Poles and Their Influence on the Process Family, Union, Household Formation and Dissolution. SAS USER'S GUIDE*. Warsaw School of Economics, SAS Institute Polska, Warsaw 2002.

² Compare E. Frątczak and others ., *ibidem*.

Section III comprises sample applications of databases to analyses using the SAS system, which includes construction of simple and complex tables, estimation of life tables and application of logistic regression models.

The manual is supplemented with three parts of a questionnaire and part of the instruction including some basic classifications.

The user's manual has been prepared in two versions: Polish and English. The Polish version, more extended than English one, includes detailed descriptions of survey organization, data conversion, control programs, cleaning and construction of databases.

We hope that Polish experience will serve all those who organize retrospective surveys and analyze their results. These studies promote SAS as one of statistical systems applicable not only to business analyses, but also in didactics and research work.

Maybe the Polish experience will be used in the wide-scale projection *Gender and Generation Program* currently carried out in Europe.³

It is worth to underline that the publication that we present to our Readers, is the successive joint scientific-business undertaking of the Institute of Statistics and Demography WSE and the SAS Institute Poland.

We hope that this manual will help fulfil the didactic, research and promotional assignments with the use of SAS System.

PART ONE

1. GENERAL INFORMATION

The Institute of Statistics and Demography has initiated a survey entitled: ***“THE EVALUATION OF CHANGES IN ATTITUDES AND REPRODUCTIVE BEHAVIOURES OF YOUNG AND MIDDLE GENERATIONS OF FEMALE AND MALE POLES AND THEIR INFLUENCE ON THE PROCESS OF FAMILY, UNION, HOUSEHOLD FORMATION AND DISSOLUTION”***. The Research Project was sponsored partly by The Ministry of Science and Informatyzation research project No. 2H02B 006 25 “The changes of reproductive behaviours in Poland and their consequences for formation and dissolution of families, relationships and households.” Panel survey II phase. The project has been carried out by a research team including Professor Janina Jóźwiak (Warsaw School of Economics) – *the project manager*, Professor Janusz Balicki (Cardinal S.Wyszyński University in Warsaw) and Professor Ewa Frątczak (Warsaw School of Economics) – *the project leaders*, and two other team members: Aneta Ptak-Chmielewska, Dr. (Warsaw School Economics) and Kazimierz Latuch, M.Sc. (Central Statistical Office). As the funds provided by the Ministry of Science and Informatyzation turned out to be insufficient for the survey completion, the researchers took the trouble to find some sponsors. A part of costs has been covered with the statutory research funds of the Institute of Statistics and Demography Warsaw School of Economics. The survey was commissioned by the Institute of Statistics and Demography, Warsaw School of Economics – SGH to the company **PBS Spółka z o.o.** with the business premises in Sopot, No. 2 Junaków street, registered in the KRS (National Register of Associations) with the number 0000189170. The first stage of entering the survey data was carried out by the students cooperating with the Institute of Statistics and Demography of the Warsaw School of Economics with the BLAISE software, constructed by Kazimierz Latuch. In the next stage, the data sets were transferred to the Institute of Statistics and Demography as text files, together with source questionnaires, where they were cleaned and entered on databases by the students of the Year Five of the Institute of Mathematics and Computer Sciences of the Warsaw University of Technology (Politechnika Warszawska). Ewa Płonkowska and Adam Pasternak–Winiarski worked on the construction of data sets and bases. Urszula Gach and Kamil Sienkiewicz from the Institute of Statistics and Demography Warsaw School of Economics participated in the conceptual works and discussions on the merits of database construction. Moreover, Marek Pęczkowski from the Warsaw University actively participated in the process of elaboration of the Manual. All works concerning database construction and elaboration of the Manual were carried out under the direction of Professor Ewa Frątczak.

The major part of works connected with compilation of the manual was financed from the own research project managed by Professor Ewa Frątczak, within the framework of the statutory research for the years 2005 and 2006 at the Institute of Statistics and Demography, College of Economic Analyses, Warsaw School of Economics.

Survey ***“THE EVALUATION OF CHANGES IN ATTITUDES AND REPRODUCTIVE BEHAVIOURES OF YOUNG AND MIDDLE GENERATIONS OF FEMALE AND MALE POLES AND THEIR INFLUENCE ON THE PROCESS OF FAMILY, UNION, HOUSEHOLD FORMATION AND DISSOLUTION”*** panel III was carried out in January 2006. The sample for the survey was prepared by the Manual author’s team. The survey was carried out on the sample of 1053 households (1534 respondents aged 18-54 years) among the residents of Poland living mainly in towns with 100 thousand and more residents.

The voluntary, representative poll of households was carried out with the use of the method of a direct interview with the respondent. Three closely interrelated questionnaires were used for the survey; Questionnaire A, concerning the whole household and Questionnaires B and C, meant for each of the household members aged 18–54. Supplement A includes the forms of all three sections of the questionnaire.

The interviewer was responsible for all three parts of the questionnaire (A, B, and C).

2. SAMPLING SCHEME

The statistical unit in the survey comprised a household. As the basis for determination of the statistical units were applied the data of population census that comprised the state of population on 20.05.2002. The survey unit comprised a respondent aged 18-54 years, member of a household.

The selection of the households for the sample was based on the stratification. The strata were selected on the basis of the country's administrative division into the powiats. In this way were established three categories of the strata from which were first selected powiats; then within the powiats were selected households.

The first category comprised the separated cities with a powiat status. There are six of them and all were chosen. They comprised 2,229,400 households (16,7%).

No.	City	Voivodship	The number of households
1	Łódź	łódzkie	351952
2	Warszawa	mazowieckie	763777
3	Kraków	małopolskie	306874
4	Poznań	wielkopolskie	233867
5	Wrocław	dolnośląskie	268645
6	Trójmiasto	pomorskie	304285
	TOTAL		2229400

Trójmiasto includes the cities: Gdańsk, Gdynia, Sopot.

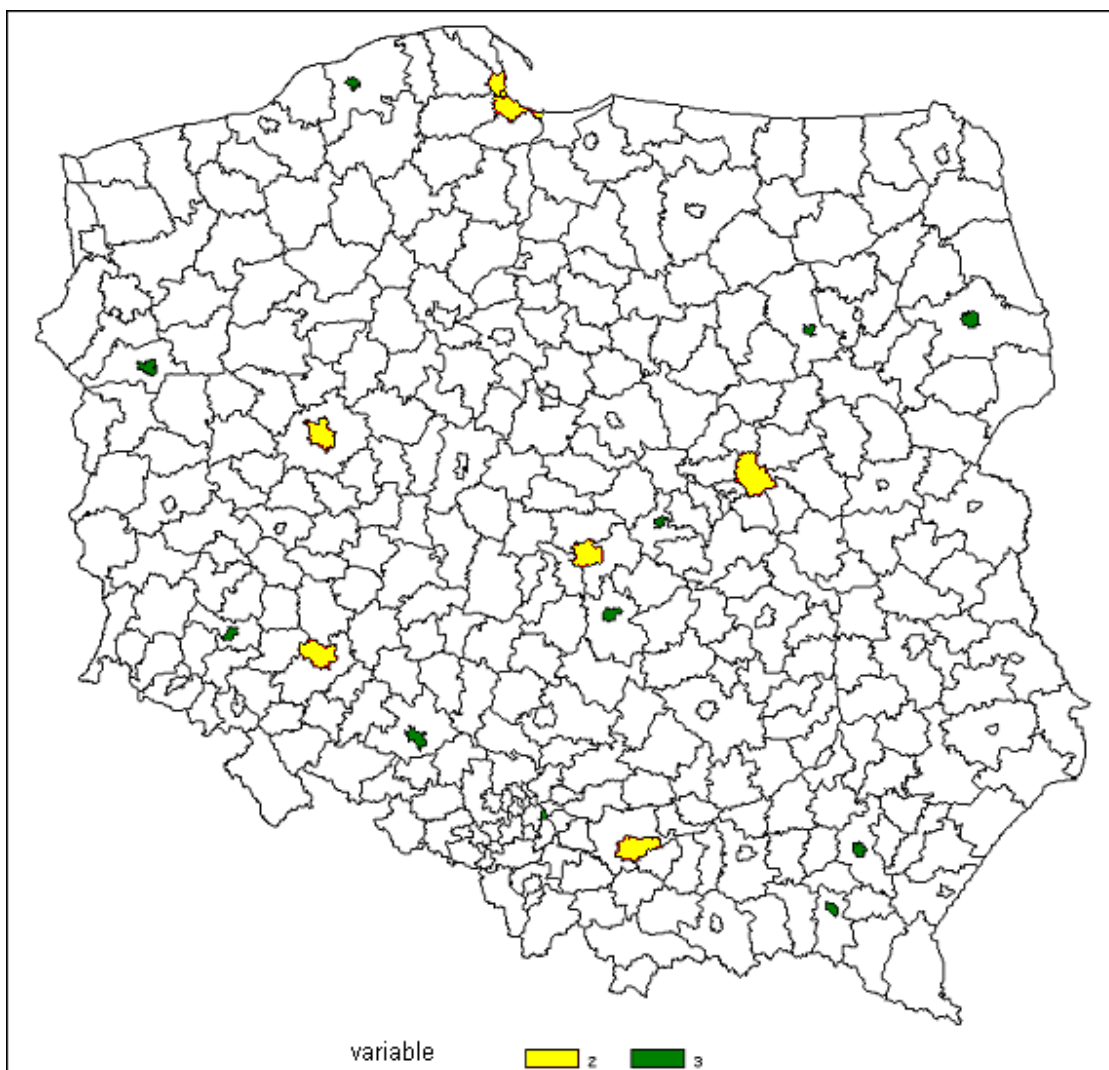

The second category comprised 56 urban powiats (towns with a powiat status). They contained 2,947,761 households (22.1%). Of this category 11 powiats were sampled (about 1/5) through the simple sampling without replacement (each powiat had the same sampling probability).

The sampled powiats and the number of households

No.	Town/city	Voivodship	The number of households
1	Rzeszów	podkarpackie	57855
2	Piotrków Trybunalski	łódzkie	31619
3	Legnica	dolnośląskie	41765
4	Białystok	podlaskie	115492
5	Gorzów Wielkopolski	lubuskie	47812
6	Mysłowice	śląskie	28514
7	Krosno	podkarpackie	17049
8	Opole	opolskie	52369
9	Skierniewice	łódzkie	18485
10	Słupsk	zachodniopomorskie	39012
11	Ostrołęka	mazowieckie	19104
	TOTAL		469076

Due to the sampling method, the selected households do not comprise a sample representative for the Polish households: therefore adequate weights have to be applied

The map presents distribution of the sampled powiats in all categories of powiats.

2 – cities (Warszawa, Kraków, Poznań, Wrocław, Łódź, Trójmiasto⁴;

3 – towns with a powiat status (wylosowaliśmy 11 z 56)

The number of the interviewed households:

- I. Warszawa – 125
- II. Kraków, Poznań, Wrocław, Łódź, Trójmiasto – 65 each
- III. towns with a powiat status – 50 each

The total number of households in particular strata:

Cities – 450 households;

Towns with a powiat status – 550 households

The actual number of the surveyed households was 1053. The excess of the surveyed households as compared with the sample size, is due to the fact that during the field survey it turned out that there were cases that more than one household lived in the sampled dwellings; then all these households participated in the survey.

⁴ Gdańsk, Gdynia and Sopot are treated as a one city

3. WEIGHTS SYSTEM CONSTRUCTION

For households

The weights were established for particular voivodshups where the selected households were situated. The table below presents:

- the number of households in population. It comprises the sum of the six separated cities with the powiat status and eleven towns with a powiat status, total of 2,698,476.
- the number of households in the sample, total of 1053.

Weights for voivodships were created as quotients of the number of households in population by the number of households in the sample (*weight*), that were then standardized in such a way that the sum of weights equals the number of observation, i.e. the number of households in the sample (*weighthh*).

Voivodship	Code	Separated cities	Towns with a powiat status	The number of households in population	The number of households in the sample	weight	weighthh
Dolnośląskie	02	1	1	310410	120	2586.750	1.009402
Lubuskie	08		1	47812	54	885.407	0.345504
Łódzkie	10	1	2	402056	180	2233.644	0.871613
Małopolskie	12	1		306874	69	4447.449	1.735485
Mazowieckie	14	1	1	782881	176	4448.188	1.735773
Opolskie	16		1	52369	55	952.164	0.371554
Podkarpackie	18		2	74904	102	734.353	0.286559
Podlaskie	20		1	115492	53	2179.094	0.850327
Pomorskie	22	1	1	343297	124	2768.524	1.080334
Śląskie	24		1	28514	55	518.436	0.202304
Wielkopolskie	30	1		233867	65	3597.954	1.403994
TOTAL		6	11	2698476	1053	2562.655	1.000000

For persons

According to the CSO estimates on the state of population on December 31, 2005, the population in towns with over 100 thousand residents by sex and age groups amounted (in thousand persons):

		Population 31 XII 2005	
Age group	Towns over 100 thous. men	Towns over 100 thous. women	Towns over 100 thous.
18-19	153	155	308
20-24	496	488	984
25-29	500	485	985
30-34	428	428	856
35-39	336	336	672
40-44	347	331	678
45-49	467	414	881
50-54	515	436	951
18-54	3242	3073	6315
% sex	51,34	48,66	100,00

In the sample data set this distribution comprised (the numbers):

		Sample	
Age group	Men	Women	Total
18-19	62	56	118
20-24	130	141	271
25-29	81	135	216
30-34	81	93	174
35-39	63	97	160
40-44	52	103	155
45-49	84	122	206
50-54	45	124	169
18-54	598	871	1469
% sex	40,71	59,29	100,00

The distribution by sex and age groups in the population and sample differs. The table below presents distribution age group in the population and sample, separately for men and women.

Age group	% population		% sample	
	Men	Women	Men	Women
18-19	4.72	5.04	10.37	6.43
20-24	15.30	15.88	21.74	16.19
25-29	15.42	15.78	13.55	15.50
30-34	13.20	13.93	13.55	10.68
35-39	10.36	10.93	10.54	11.14
40-44	10.70	10.77	8.70	11.83
45-49	14.40	13.47	14.05	14.01
50-54	15.89	14.19	7.53	14.24
18-54	100.00	100.00	100.00	100.00

The weights should ensure that distribution of age groups in the weighted sample of men and women in the weighted sample is the same as in the population; moreover, distribution by sex in each age group is the same as in the population.

Therefore, firstly, the distribution by age groups (separately for men and women) was corrected through multiplying by a ratio of sexes in the sample to the population. In such a way were obtained the weights allowing transposition from the ample size to the population size.

Age group	weight2m	weight2k
18-19	3112.146	2271.624
20-24	4811.701	2840.492
25-29	7784.760	2948.498
30-34	6663.755	3777.058
35-39	6726.033	2842.892
40-44	8415.625	2637.446
45-49	7011.289	2785.052
50-54	14432.946	2885.743
18-54	5421.405	3528.129

After dividing respectively by the numbers 5421.405 and 3528.129 we obtain the weights for the ample allowing keeping its size.

After multiplying each observation concerning a given sex and age group, we obtain consistency of distribution of the weighted ample and population as regard sex and age.

Age group	waga2 men	waga2 women
18-19	0.574048	0.643861
20-24	0.887538	0.805099
25-29	1.435931	0.835712
30-34	1.229157	1.070556
35-39	1.240644	0.805779
40-44	1.552296	0.747548
45-49	1.293261	0.789385
50-54	2.662215	0.817925
18-54	1.000000	1.000000

Thus three categories of weights were created:

- weights for households (weighthh);
- weights for sex and age for generalization of the result to the overall population (weightpop, where: weight2m – is a weight for men; weight2k – is a weight for women);
- weights for sex and age ensuring consistency of distribution from the ample and population (weightsampl, where: weight2 men – is a weight for men; weight2 women – is a weight for women).

The determined and described three categories of weights are included in each data set comprising the databases of the Polish Retrospective Survey 2006 included in the successive part of this Manual.

Notice: in accordance with the nomenclature applied to the SAS bases, in databases dot (.) means lack of information (missing data). This principle is applied to all data sets (databases) of the PRS 2006.

PART TWO

1. SOURCE DATA FILES

Source data from Questionnaires were registered and submitted to preliminary control with the BLAISE software. Next, they were stored in text files of constant format, separately for each of the 16 voivodeships. Subsequently, files from different voivodeships were amalgamated. Hence, several text files were created, which included the data from individual sections of the Questionnaire: 4 files for Section A, 7 files for Section B and 1 file for Section C.

Table 1.1. Source data files (data from the Central Statistical Office – Branches)

Item	File	Size	Contents
1	SGHA.A00	129 789	A. Section 1
2	SGHA.A03	639 372	A. Section 2
3	SGHA.A04	325 798	A. Section 3
4	SGHA.A05	493 740	A. Section 4
5	SGHB.A00	1 947 210	B. Section 1,2,3, part 9
6	SGHB.A03	545 448	B. Section 4
7	SGHB.A04	771 282	B. Section 5
8	SGHB.A05	471 658	B. Section 6
9	SGHB.A06	979 200	B. Section 7
10	SGHB.A07	441 588	B. Section 8
11	SGHB.A08	1 830 282	B. Cont. Section 9
12	SGHC.A00	1 113 929	C. Section 1, 2, 3, 4, 5, 6, 7

Software converting the text to SAS and SPSS was used with each of the 12 above-mentioned source files. SAS programs, written in the SAS 4GL language, were used for further data processing. These programs are designed to convert the information included in text files to output files in SAS format. Moreover, the programmes include description of variables (labels of variables and values) and they enable recording some values, as included in the primary sets. Hence, the output sets have dictionary of variables. Full texts of programs are included in the Polish version of the Manual.

The following data files in SAS format were obtained after the conversion:

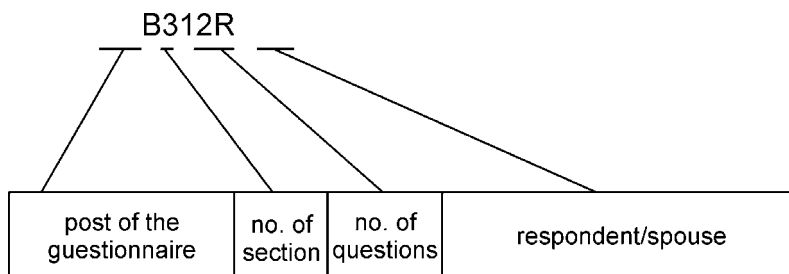

Table 1.2. Source data files in SAS

Item	File	Size	Content
1	A1.SAS	394 240	A. Section 1
2	A3.SAS	1 721 344	A. Section 2
3	A4.SAS	898 048	A. Section 3
4	A5.SAS	713 728	A. Section 4
5	B.SAS	8 520 704	B. Section 1,2,3, cz.9
6	B3.SAS	787456	B. Section 4
7	B4.SAS	848 896	B. Section 5
8	B5.SAS	812 032	B. Section 6
9	B6.SAS	1 798 208	B. Section 7
10	B7.SAS	476 160	B. Section 8
11	B8.SAS	2 937 856	B. Cont. Section 9
12	C.SAS	816 768	C. Section 1,2,3,4,5,6,7

Empty records were removed from the files.

2. DATA CHECKING, NEW VARIABLES

The new variables, which were constructed and entered on the database, were based on the processed information coming from individual Sections of the Questionnaire. Authors of the programs, converting data from text files to SAS, used a very simple code to name the variables:

The same method was applied to name the new variables in order to make the system as clear as possible. 'N' letter (for New) was added at the beginning of each new name. The remaining components of the numbers have exactly the same meaning as the one described above. The only difference is the age, which was not asked directly, but counted by the following formula:

$$NBR = (2006 - B3032R) \cdot 12 + 1 - B3031R$$

where: B3032R denotes the respondent's year of birth in the RRRR format, and B3031R is their month of birth. Certainly, NBR is the respondent's age in months. NBW was counted analogically, with B3032W and B3031. Due to the necessity to frequently use the completed age of the respondent, NB001R and NB001W variables were constructed by the following formulae:

$$NB001R = \left\lfloor \frac{NBR}{12} \right\rfloor$$

$$NB001W = \left\lfloor \frac{NBW}{12} \right\rfloor$$

The program code in 4GL language is as follows:

```
if NB303r in (9999 9998) then NBR=NB303r;
else NBR=1-B3031R+(2006-B3032R)*12;
if NB303w in (9999 9998) then NBw=NB303w;
else NBw=1-B3031w+(2006-B3032w)*12;
if NBR in (9999 9998) then Nb001R=NBR-9000;
else Nb001R=floor(NBR/12.0);
if NBW in (9999 9998) then Nb001R=NBW-9000;
else Nb001w=floor(NBW/12.0);
```

Lines including 9999 and 9998 were designed so as to preclude causal counting of some lacking data as irregular data. All the variables with N-prefix to be found in the above-mentioned software (and not only) are described below:

NA403	= 'Month from 1900 date of event occurrence'
NB001R	= 'Respondent's age (in years)/*at survey */
NB001W	= 'Spouse's/partner's age (in years)/*at survey */
NBR	= 'Respondent's age (in months)/*at survey */
NBW	= 'Spouse's/partner's age (in months)/*at survey */
NB303R	= 'Month from 1900 at birth'
NB303W	= 'Month from 1900 at birth (W)'
NB315R	= 'Month from 1900 at parents' divorce or separation '
NB315W	= 'Month from 1900 at parents' divorce or separation (W)'
NB321	= 'Month from 1900 at leaving parental home'
NB326A	= 'Month from 1900 at returning to the parental home'
NB401	= 'Month from 1900 at union formation'
NB409	= 'Month from 1900 at marriage'
NB410	= 'Month from 1900 at starting cohabitation'
NB412	= 'Month from 1900 at finishing cohabitation'
NB413	= 'Month from 1900 at union dissolution'
NB503	= 'Month from 1900 at child birth'
NB505	= 'Month from 1900 at coming to family (union) (for adopted children)'
NB507	= 'Month from 1900 at child's death'
NB509	= 'Month from 1900 at leaving parental home by a child (first time)'
NB512	= 'Month from 1900 at entering labour force'
NB601	= 'Month from 1900 at entering education'
NB605	= 'Month from 1900 at completing (interrupting) education'
NB701	= 'Month from 1900 at the beginning of employment or unemployment periods'
NB709	= 'Month from 1900 at completing a given period of activity'
NB801	= 'Month from 1900 at arrival at a dwelling'
NB907	= 'Duration of acquaintance with a given person (in months)'
NB910	= 'Person's age in months'
NB912	= 'Duration of contact with a given person (in months)'
NB4	= 'Month from 1900 at first union'
NB7	= 'Month from 1900 at entering labour force'
NB6a	= 'Month from 1900 at completing the highest education'
NB6b	= 'The highest achieved education'

Variables of the type NB801, i.e. the ones described as 'Month from 1900 at ...' still necessitate further clarification. Simply, this is the number of months, which passed from 1 January 1900 to the event. This can be illustrated with an example, which simultaneously shows the calculation method used. Let us use 17 August 1979 as a date of birth. The day number (17) will not be taken into account, but only 1979-1900=79 and the month's number, i.e. 8. Hence NB303R = 79*12 + 8 = 956. This is the number of months that passed from 1 January 1900 to 31 August 1979.

Beside the new variables, based on the data from the above-described Questionnaires, some more variables, related to the weights, were added. These variables are:

- wagahh – weights for households
- wagapop – weights for population
- wagasampl – weights for sample

In order to simplify handling the database, the attached variables were invariably positioned as the last columns in the tables created by SAS.

3. DATABASE STRUCTURE – VARIABLES, CATEGORIES

The base consists of nine files in all. They were based on the survey Questionnaire. While designing the database, most files were supplemented with basic information describing the respondent. The database includes the files, whose contents have been presented in the following specification.

All the data have been sorted out by household's number, and then by person's number.

Table 1.3.

File	Basic content	Supplementary data	
A	Questionnaire A	Data provided by the CSO Supplementary variables: NBR, NA403	
B1	Questionnaire B Sections 1, 2, 3	Data provided by the CSO Supplementary variables: NB303R, NB303W, NB315R, NB315W, NB321, NB326A, NB001R, NBR, NB001W, NBW	
B2	Questionnaire B Section 4	Some data in Section One of Questionnaire A (denoting number of persons in a household, household's sources of maintenance) Some data in Section Three of the Questionnaire A (describing maintenance sources of individual household members) Data provided by the CSO Some data in Sections One and Three of Questionnaire B (describing personal information about the respondent) Supplementary variables: NB303R, NB303W, NB315R, NB315W, NB321, NB326A, NB001R, NBR, NB001W, NBW, NB4, NB7, NB6a, NB6b	Supplementary variables: NB401, NB409, NB410, NB412, NB413
B3	Questionnaire B Section 5		Supplementary variables: NB503, NB505, NB507, NB509, NB512
B4	Questionnaire B Section 6		Supplementary variables: NB601, NB605
B5	Questionnaire B Section 7		Supplementary variables: NB701, NB709
B6	Questionnaire B Section 8		Supplementary variable: NB801
B7	Questionnaire B Section 9		Supplementary variables: NB907, NB910, NB912
C	Questionnaire C	Some data in Sections One, Two and Three of Questionnaire B (describing the Interview B and including personal information about the respondent) Data provided by the CSO Some data in Section One of Questionnaire A (describing the number of persons in a household, household's sources of maintenance and collecting information for Questionnaire A) Some data in Section two of Questionnaire A (describing realisation of Questionnaires B and C) Some data in Section Three of Questionnaire A (describing maintenance sources of individual household members) Supplementary variables: NBR, NB001R, NB4, NB7, NB6a

PART THREE

This section includes sample SAS applications to data processing on the created data bases. Three problems have been presented to illustrate application of SAS procedures. The problems concern distribution of one variable and two variables, survival and logistic regression analyses. Content of a sample set of data, named EXAMPLE, has also been described.

1. DESCRIPTIVE ANALYSIS

1.1. One variable distribution

Using the EXAMPLE set enables exploring the distribution of a selected variable. Distribution of the LPHAGE variable (age at the time of leaving parental home) has been presented here, in gender-specific arrangement (i.e. separate for males and females). Therefore we create two new data sets (FEMALES, MALES).

```
if b3212 > 0 then lphage = b3212 - b3032r;
if b3211 < b3031r then lphage = lphage - 1;
if (lphage < 15 and lphage ne .) then lphage = -1;
```

```
data females males;
set pbr2006.example;
if B301R=2 then output females;
if B301R=1 then output males;
run;
```

Next using the FREQ procedure the distribution of variable LPHAGE can be created.

```
TITLE 'Female age distribution at the time of leaving parental home';
proc freq data=females;
tables lphage;
run;
```

Female age distribution at the time of leaving parental home

LPHAGE	Frequency	Percent	Cumulative Frequency	Cumulative Percent
-1	30	4.45	30	4.45
15	15	2.23	45	6.68
16	13	1.93	58	8.61
17	27	4.01	85	12.61

37	3	0.45	671	99.55
38	1	0.15	672	99.70
39	1	0.15	673	99.85
46	1	0.15	674	100.00

Frequency Missing = 196

```
TITLE 'Male age distribution at the time of leaving parental home';
proc freq data=males;
tables LPHAGE;
run;
```

Male age distribution at the time of leaving parental home

LPHAGE	Frequency	Percent	Cumulative Frequency	Cumulative Percent

-1	10	2.51	10	2.51
15	14	3.51	24	6.02
16	8	2.01	32	8.02
17	18	4.51	50	12.53
18	32	8.02	82	20.55
19	53	13.28	135	33.83
20	24	6.02	159	39.85
21	34	8.52	193	48.37
22	40	10.03	233	58.40
23	27	6.77	260	65.16
24	38	9.52	298	74.69
25	25	6.27	323	80.95
26	15	3.76	338	84.71
27	19	4.76	357	89.47
28	12	3.01	369	92.48
29	6	1.50	375	93.98
30	6	1.50	381	95.49
31	6	1.50	387	96.99
32	2	0.50	389	97.49
33	2	0.50	391	97.99
34	3	0.75	394	98.75
35	2	0.50	396	99.25
37	1	0.25	397	99.50
38	1	0.25	398	99.75
39	1	0.25	399	100.00

Frequency Missing = 203

In both tables the value -1 denotes leaving parental home before the age of 15.

1.2. Two or more variables distribution

Data collected in the EXAMPLE set enable analysing bivariate distributions. Distribution of two variables B308R (respondent's education level) and B313R (Respondent have lived up to 15) will be investigated. The following program will be applied to do this:

```
TITLE 'Dependencies';

proc freq data=new.example ;
tables B308R * B313R /out=dep;
run;

proc transpose data=dep out=z prefix=_ ;
by B308R;
id B313R;
run;

data z;
set z(drop =_NAME_);
run;

proc print data=z noobs label;
run;
```

Results are presented in table 1.1.

Table 1.1. Connection between education level and place of residence up to the age of 15

Respondent's education level	Distribution	Place of residence up to the age of 15					Rural	Missing
		Urban 500 ths and more	Urban 100–500 ths	Urban 50–100 ths	Urban 20–50 ths.	Urban 20 ths and less		
Tertiary	frequency	93	71	36	56	37	48	8
	percent	6.32	4.82	2.44	3.80	2.51	3.26	0.54
Post secondary	frequency	25	15	9	12	3	6	4
	percent	1.70	1.02	0.61	0.81	0.20	0.41	0.27
Vocational secondary	frequency	102	56	38	42	13	75	12
	percent	6.93	3.80	2.85	2.58	0.88	5.10	0.82
General secondary	frequency	93	48	37	27	11	35	12
	percent	6.32	3.26	1.83	2.51	0.75	2.38	0.82
Basic vocational	frequency	65	49	42	33	15	96	6
	percent	4.42	3.33	2.24	2.85	1.02	6.52	0.41
Primary	frequency	28	18	19	9	3	28	4
	percent	1.90	1.22	0.61	1.29	0.20	1.90	0.27
Missing	frequency	4	4	3			1	21
	percent	0.27	0.27	0.20			0.09	1.42

“Frequency” cells comprise frequencies of respondents in separate classes, with regard to both categories, while the “percent” cells represent percentage shares of a class in all units. Conditional distributions can be presented analogically in a table (percentage values shown in columns or rows).

2. SURVIVAL ANALYSIS

Traditional life tables

The following order is used in traditional life tables: time intervals, number of individuals who experienced failure, and those who were censored, number of individuals exposed to the risk of transition from state1 to state 2, conditional probability of failure and its standard error, survival function, standard error of survival function, distribution function, median residual lifetime, standard error of median residual lifetime, power density function and its standard error, hazard rate and its standard error.

Interpretation of the results based on the life table estimation

Model 1 – Traditional life table for whole sample (2006 survey)

Table 2.1. Results of estimation - Traditional life table for whole sample

The LIFETEST Procedure								
Life Table Survival Estimates								
Interval [Lower, Upper)	Number Failed	Number Censored	Effective Sample Size	Conditional Probability of Failure	Conditional Probability Standard Error	Survival	Failure

Summary of the Number of Censored and Uncensored Values								
		Total	Failed	Censored	Percent Censored			
		1464	1065	399	27.25			

Interpretation of the sample values for conditional probability, survival function, hazard rate and life expectancy are as follow:

1) **Number of individuals exposed to the risk** of experiencing transition from status 1 to status 2 (all respondents), for subsequent time intervals and the number of events, which occurred in a given time interval (persons who lived their parental home), served as a base for computing the conditional probability of event occurrence in this interval. Sample values in Table 1 denote:

0,0138 - probability of leaving parental home within the 5th year after finishing 10 years of age is 1,38%;

0,1465 – probability of leaving parental home within the 10th year after finishing 10 years of age is 14,65%;

0,1525 - probability of leaving parental home within the 15th year after finishing 10 years of age is 15,24%.

2) **Survival function** in the SAS package is estimated to concentrate at the beginning of the interval. Sample values (error of estimation included) are as follow:

0,9918 [0.00236] – probability that respondent will not leave parental home within 5 years after finishing 10 years of age is 99.18% ± 0,236%;

0,845 [0,00951] – probability that respondent will not leave parental home within 10 years after finishing 10 years of age is 84.5% ± 0,951%;

0,4198 [0.0138] – probability that respondent will not leave parental home within 15 years after finishing 15 years of age is 41.98% ± 1.38%.

3) **Hazard rate** is estimated under SAS in the middle of the time interval. Sample values (error of estimation included) are as follow:

0,001156 [0,000258] – risk (intensity) of respondent's leaving their parental household within 5th year after finishing 10 years of age, on the condition that they have not experienced such event before, is 0,001156 ± 0,000258;

0,013147 [0,001004] – risk (intensity) of respondent's leaving their parental household within 10th year after finishing 10 years of age, on the condition that they have not experienced such event before, is 0,013147 ± 0,001004;

0,014729 [0,001583] – risk (intensity) of respondent's leaving their parental household within 15th year after finishing 10 years of age, on the condition that they have not experienced such event before, is 0,014729 ± 0,001583.

SAS statistical package allows creating graphs for nonparametric models. Following diagrams are available:

- survival distribution function plot with confidence intervals (stratification excluded);
- $-\log(S_i)$ function plot;
- $\log[-\log(S_i)]$ function plot;

- hazard function plot (only with estimation of traditional tables);
- density function plot (only with estimation of traditional tables).

Figures obtained from estimation of Model 1 have been presented below.

Figure 1. Survival functions plot

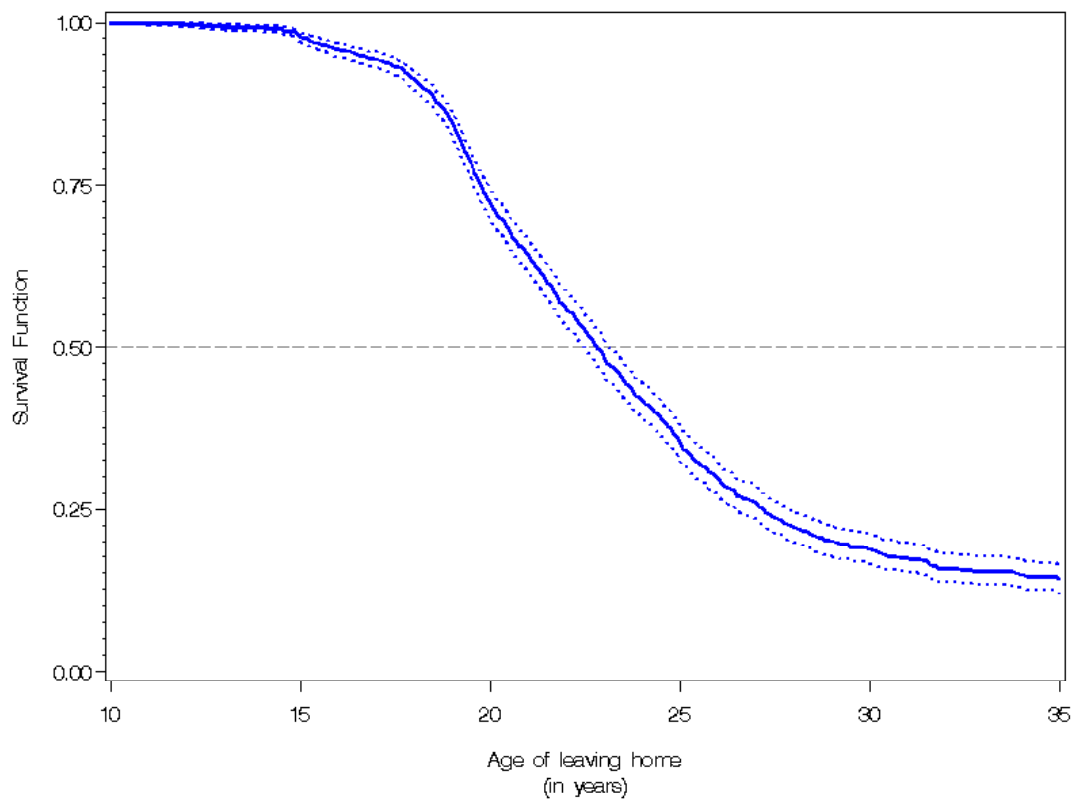

Figure 2. $-\log(S_i)$ function plot

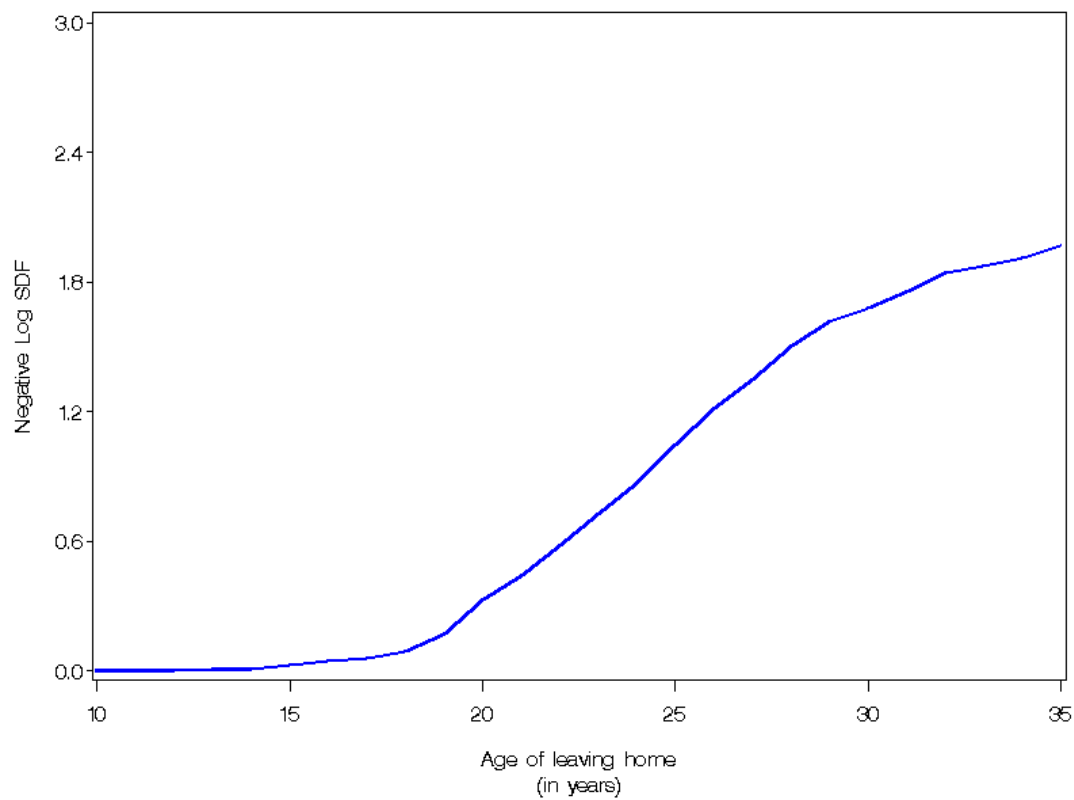

Figure 3. $\log[-\log(S_i)]$ function plot

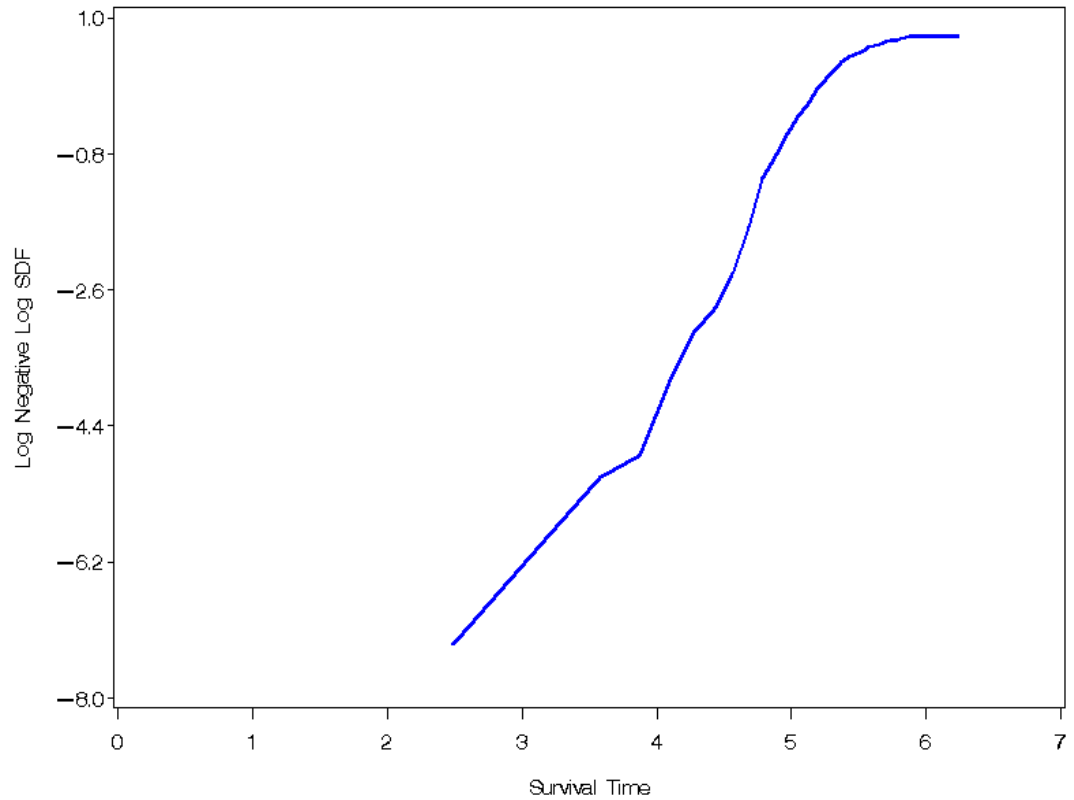

Figure 4. Hazard function plot

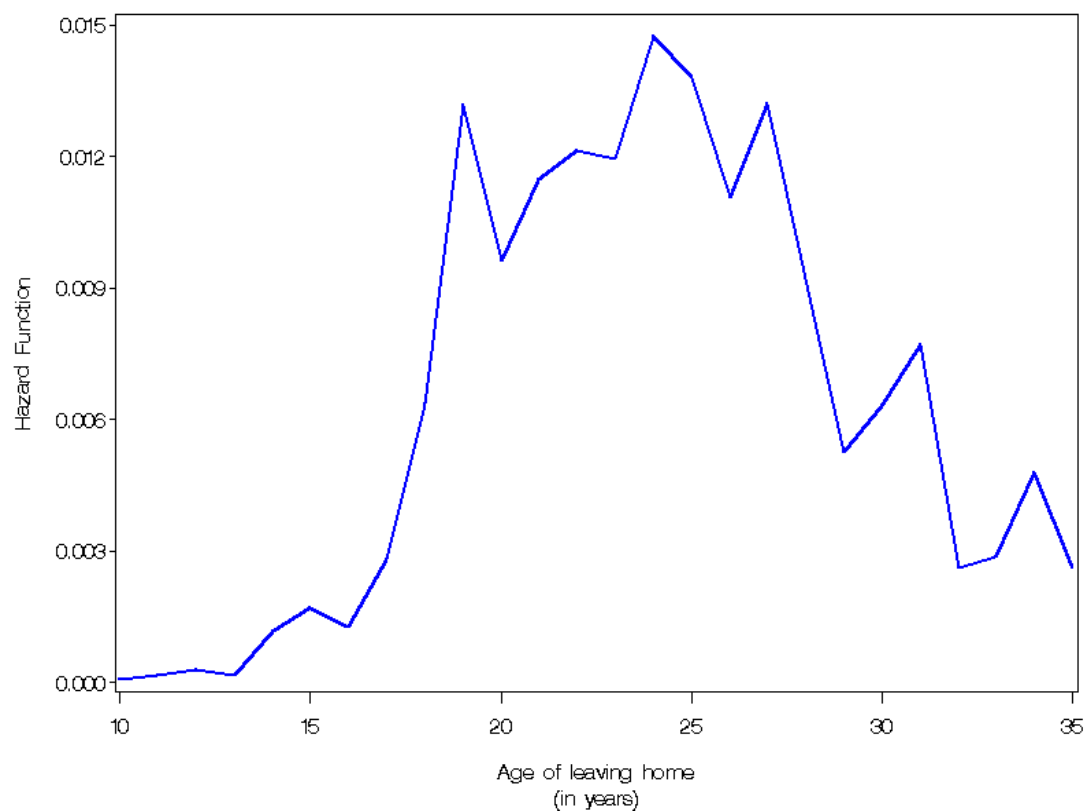

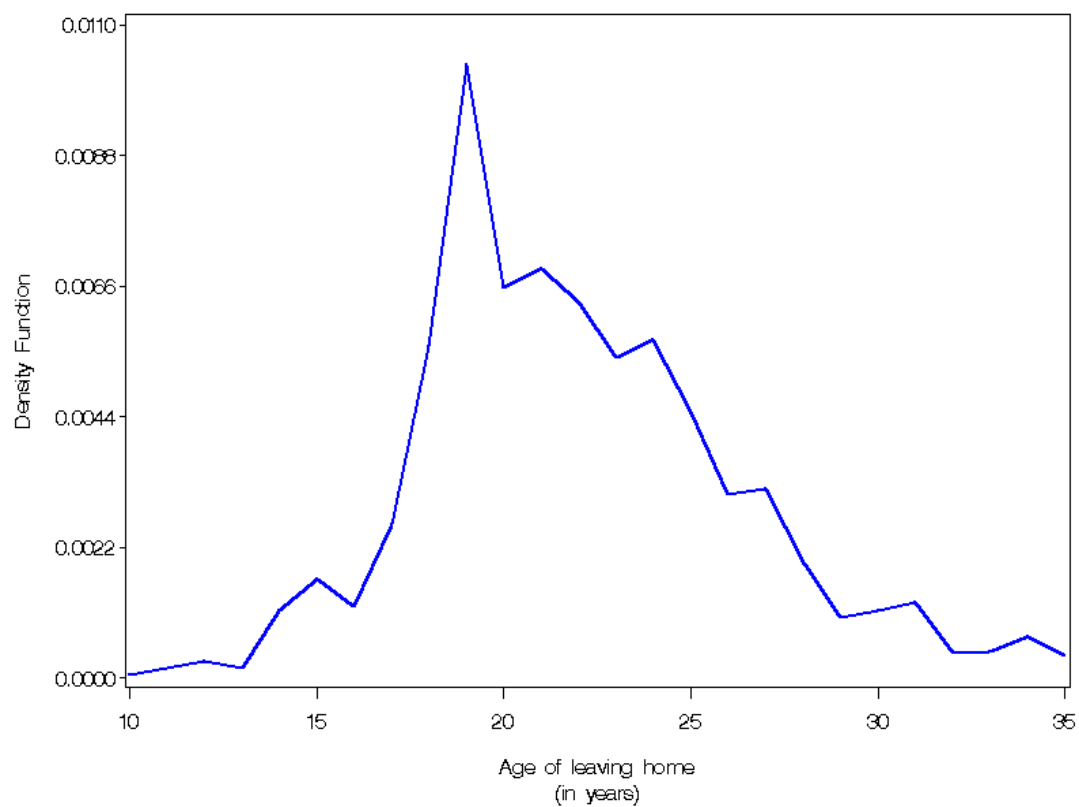

Figure 5. Density function plot

SAS system also enables estimation of traditional life tables with division into subgroups (the so-called stratification). New tables are constructed then. Sample stratification will be presented below:

Model 2 – Traditional life tables – leaving parental home by sex

Table 2.2. Results of estimation - Traditional life table for leaving parental home by sex

Summary of the Number of Censored and Uncensored Values

Stratum	sex	Total	Failed	Censored	Percent Censored
1	1	600	397	203	33.83
2	2	864	668	196	22.69

Total		1464	1065	399	27.25

In the case, where strata were used for the estimation, SAS offers two statistical test for the hypotheses verification (in order to test statistical significance between survival functions):

- Logrank,
- Wilcoxon.

Table 2.3. Verification of hypothesis concerning homogeneity between strata

The LIFETEST Procedure			
Testing Homogeneity of Survival Curves for time over Strata			
Rank Statistics			
sex	Log-Rank	Wilcoxon	
1	-72.203	-70342	
2	72.203	70342	
Covariance Matrix for the Log-Rank Statistics			
sex	1	2	
1	259.301	-259.301	
2	-259.301	259.301	
Covariance Matrix for the Wilcoxon Statistics			
sex	1	2	
1	2.0279E8	-2.028E8	
2	-2.028E8	2.0279E8	
Test of Equality over Strata			
Test	Chi-Square	DF	Pr > Chi-Square
Log-Rank	20.1049	1	<.0001
Wilcoxon	24.3992	1	<.0001
-2Log(LR)	11.9764	1	0.0005

Value of the critical significance level allows to state that the differences between survival distribution functions for men and women are statistically significant (Logrank = 20.1049, and Wilcoxon = 24.3992). Differences between the results obtained for both genders are more discernible in the graphic interpretation of the estimated tables.

Results presented in Table 3.2, as well as the figures below show that women leave their parental households younger than men do. Furthermore, at age 35 more females (87%) than males (83%) have already left their parental home.

Figure 6. Survival functions plot

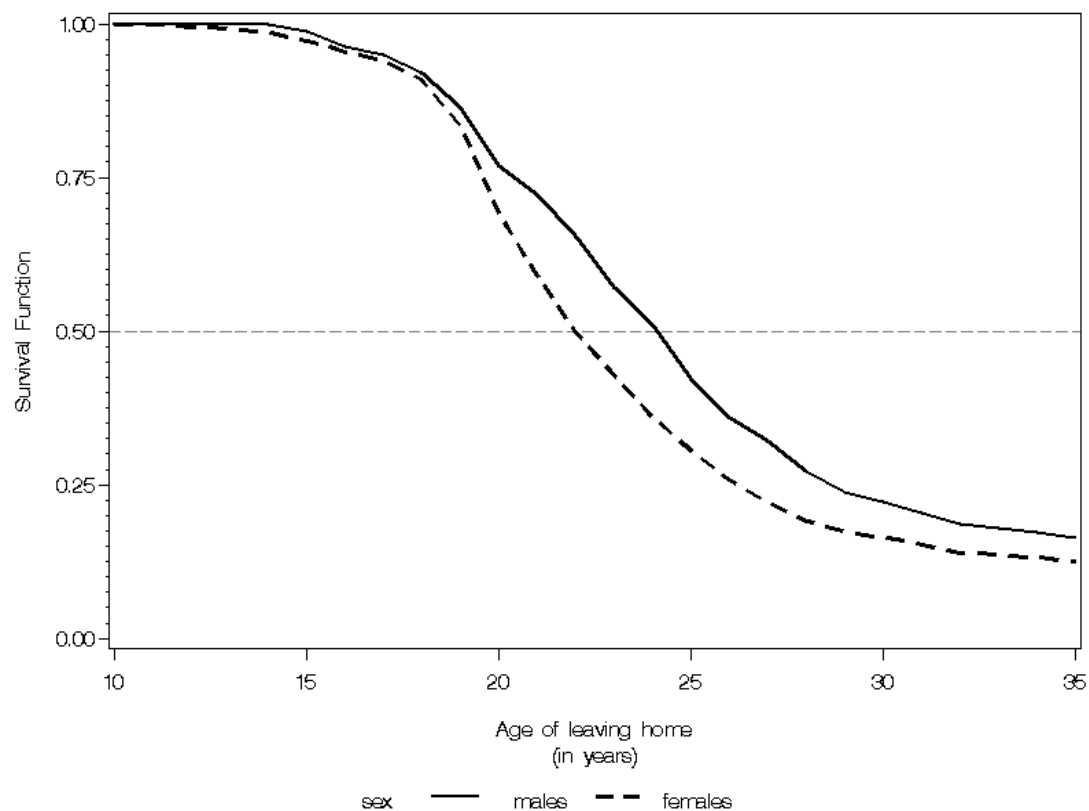

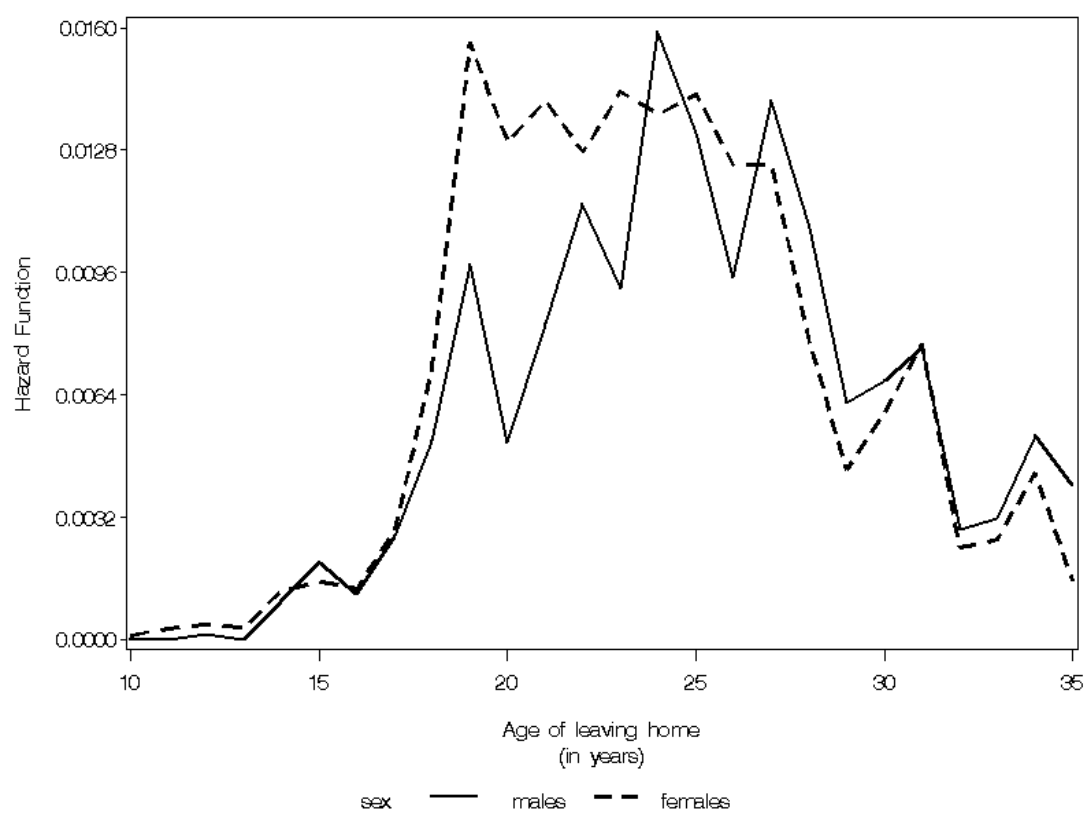

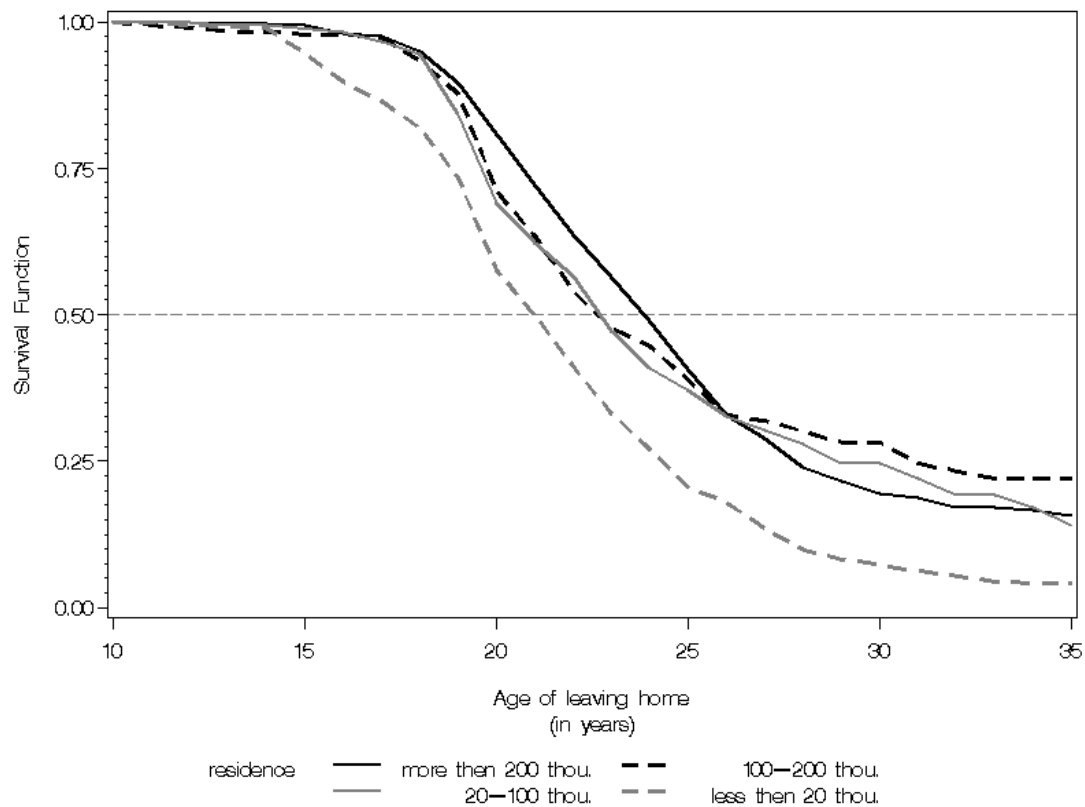

Figure 7. Hazard functions plot

Results from estimation of some additional models will be presented in the form of survival function plots.

Model 3 – Traditional life tables - leaving parental home by the place of residence category up to age 15.

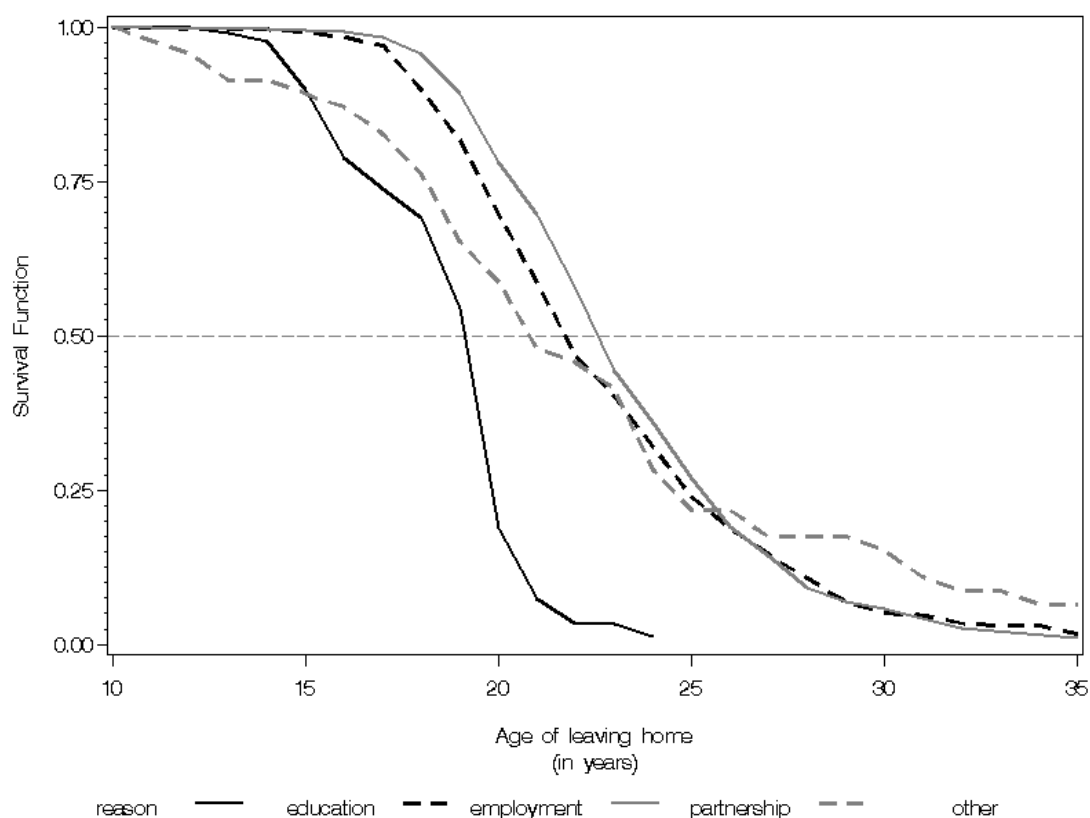

Figure 8. Survival functions plot

Concerning place of residence category up to age 15 there are some differences. Only respondents who lived in small cities and villages left their home significantly earlier than the others. This result has been expected, because the survey was conducted only in cities with more than 20,000 inhabitants. Thus only movers from rural areas and small cities could be interviewed. Differences between others 3 categories are not statistically significant at $\alpha=0.05$ (Log-Rank = 0,5890; Wilcoxon = 0,0572).

Model 4 – Traditional life tables - leaving parental home by main reason.
Only respondents who left the parental home are included in models below.

Figure 9. Survival functions plot

The figure above shows that the earliest leaving the parental household is caused by education (usually university studies). This might explain the fact that the persons who are the oldest at leaving parental households are those who live in the biggest agglomerations. They do not have to migrate, as they usually have access to universities in their own towns.

The partnership formation as a reason for leaving the parental home is characterised by the highest median age at the time of an event. This result is in line with the trend of increasing age of marriage (cohabitation in Poland is a very rare cause of partnership).

Model 5 – traditional life tables, stratified by gender and the cause of leaving parental household.

Figures 10. Survival functions for females

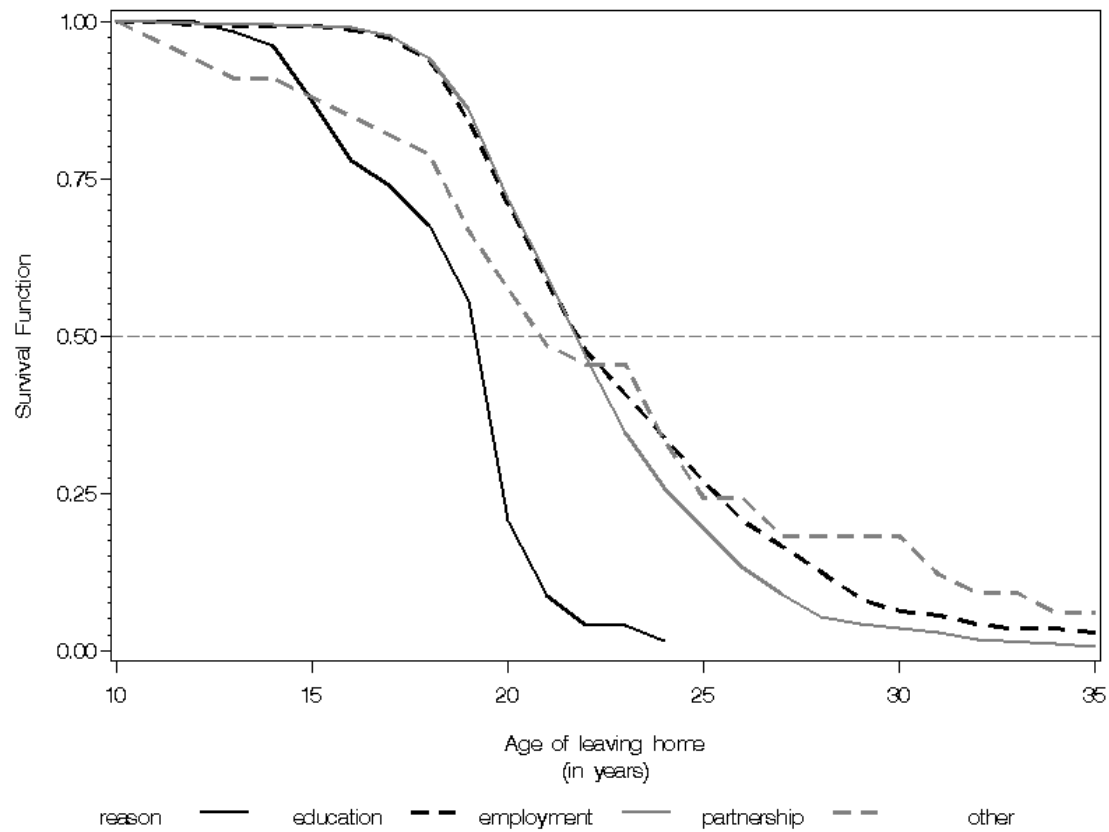

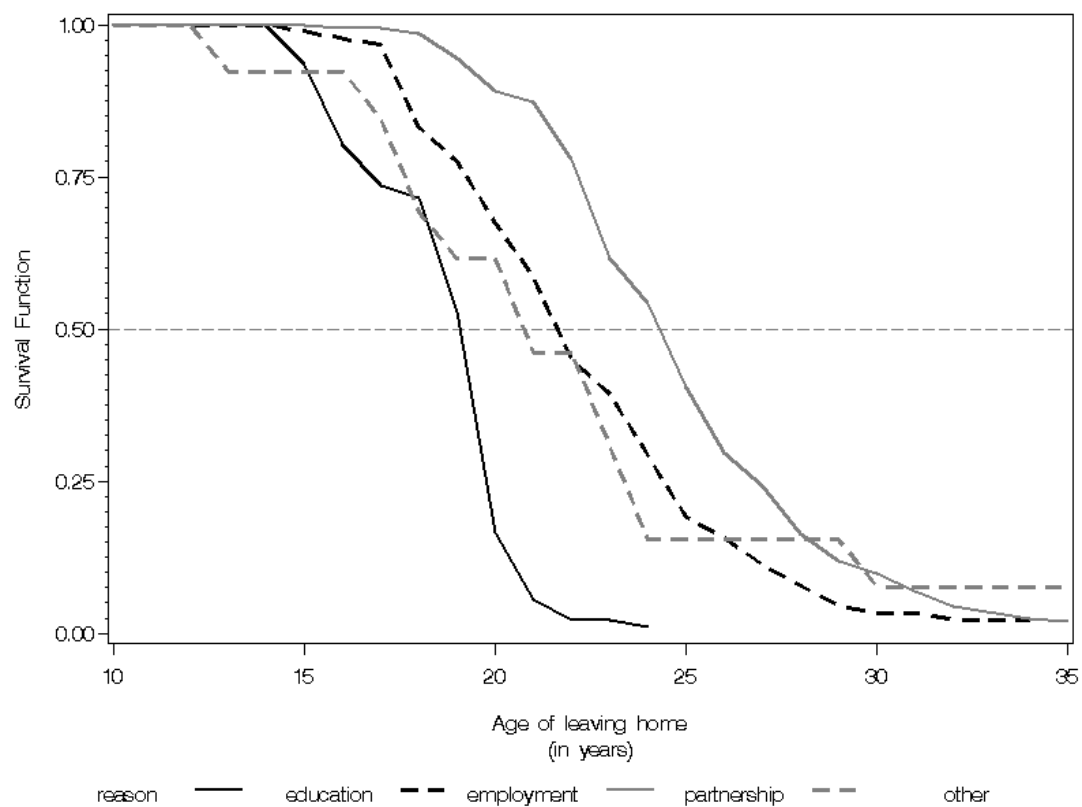

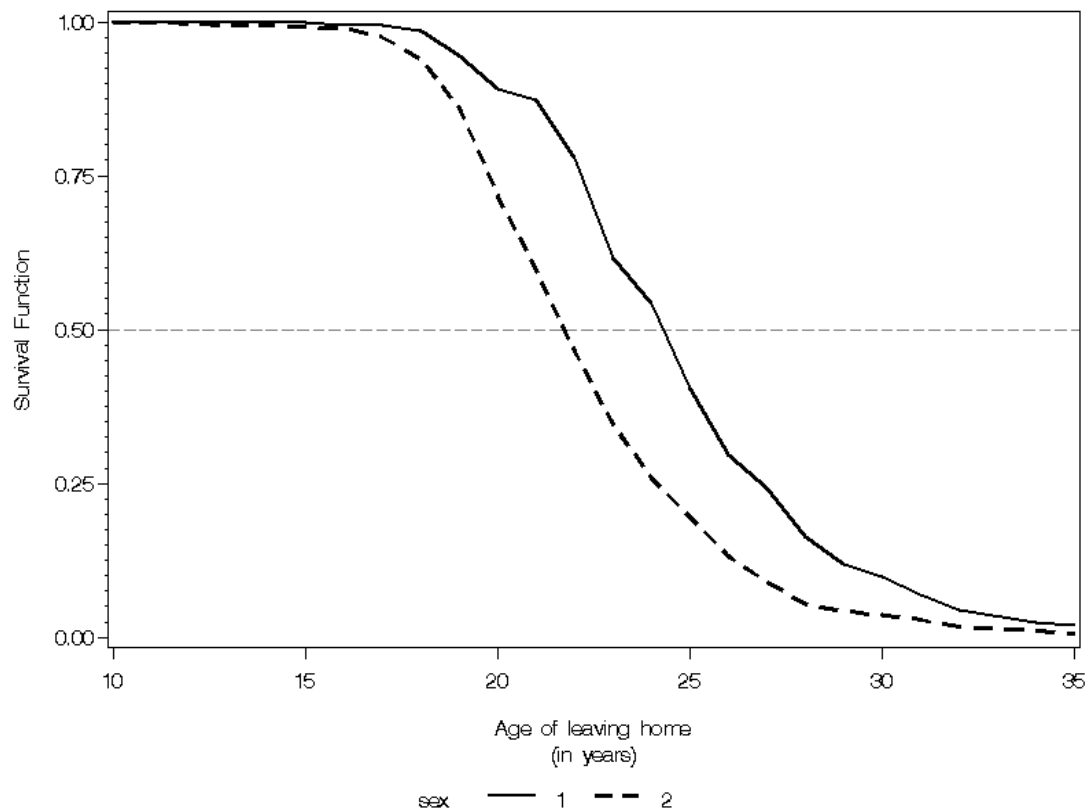

Figure 11. Survival functions for males

Double classification, like the one in the present model, allows more detailed comparisons. It is very helpful for determining the main difference between males and females. Comparing last two figures one can state that the most important difference between two genders is the timing of marriage. Females marry younger than males do and thus they leave the parental home at younger ages – the difference is circa 3 years. It is even more visible in the figure below:

Figure 12. Reason of leaving parental home - marriage

Gender-related differences are not so significant with other causes of leaving the parental home.

Appendix 1 – programs used for estimation

Comparison of two surveys

This part of the report from 2006 survey contains a comparison of some results from two last surveys, 2001 and 2006. The process of leaving the parental home and several characteristics of respondents are investigated.

Model 1 – Comparison of surveys

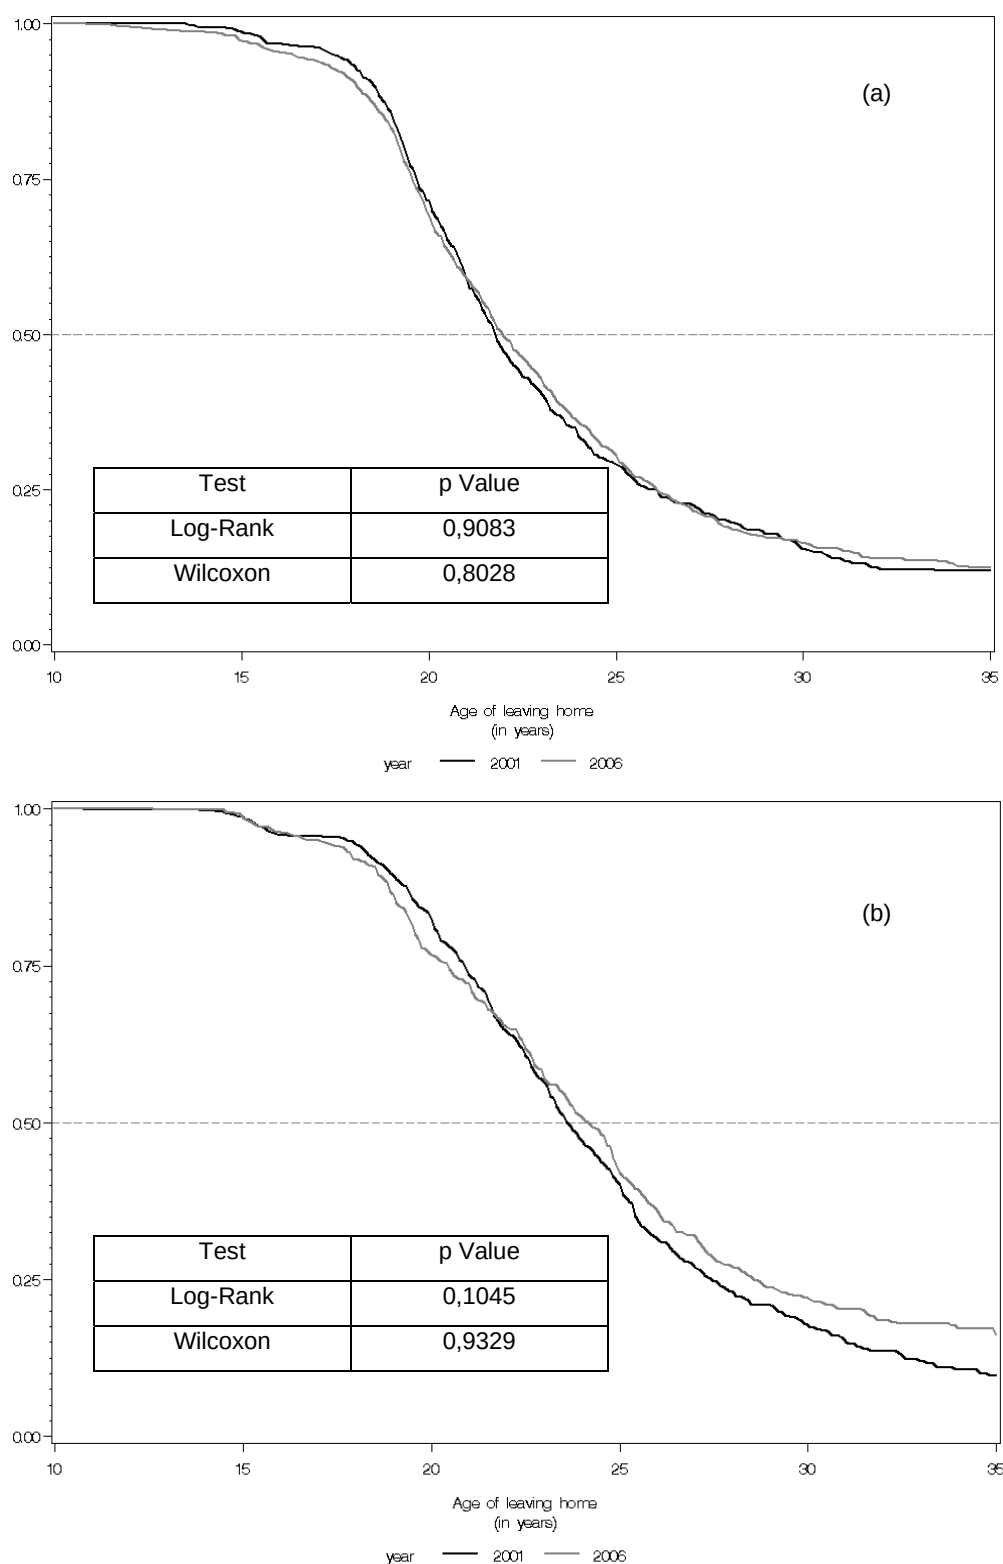

Figure 1. Survival functions

Based on these results it is observed that there are almost no significant changes. The median age of leaving the parents home remains unchanged and it is circa 23 years. Despite the tests, it seems that the decision investigated event has been spread over the time. In 2006 more people left their homes at younger ages, less than 20 years old. On the other hand, more people never experienced this transition (14% in 2006 versus 11% in 2001). Concluding, this process has been still changing and we can expect more shifts in the future.

Model 2 – leaving the parental home broken down by sex

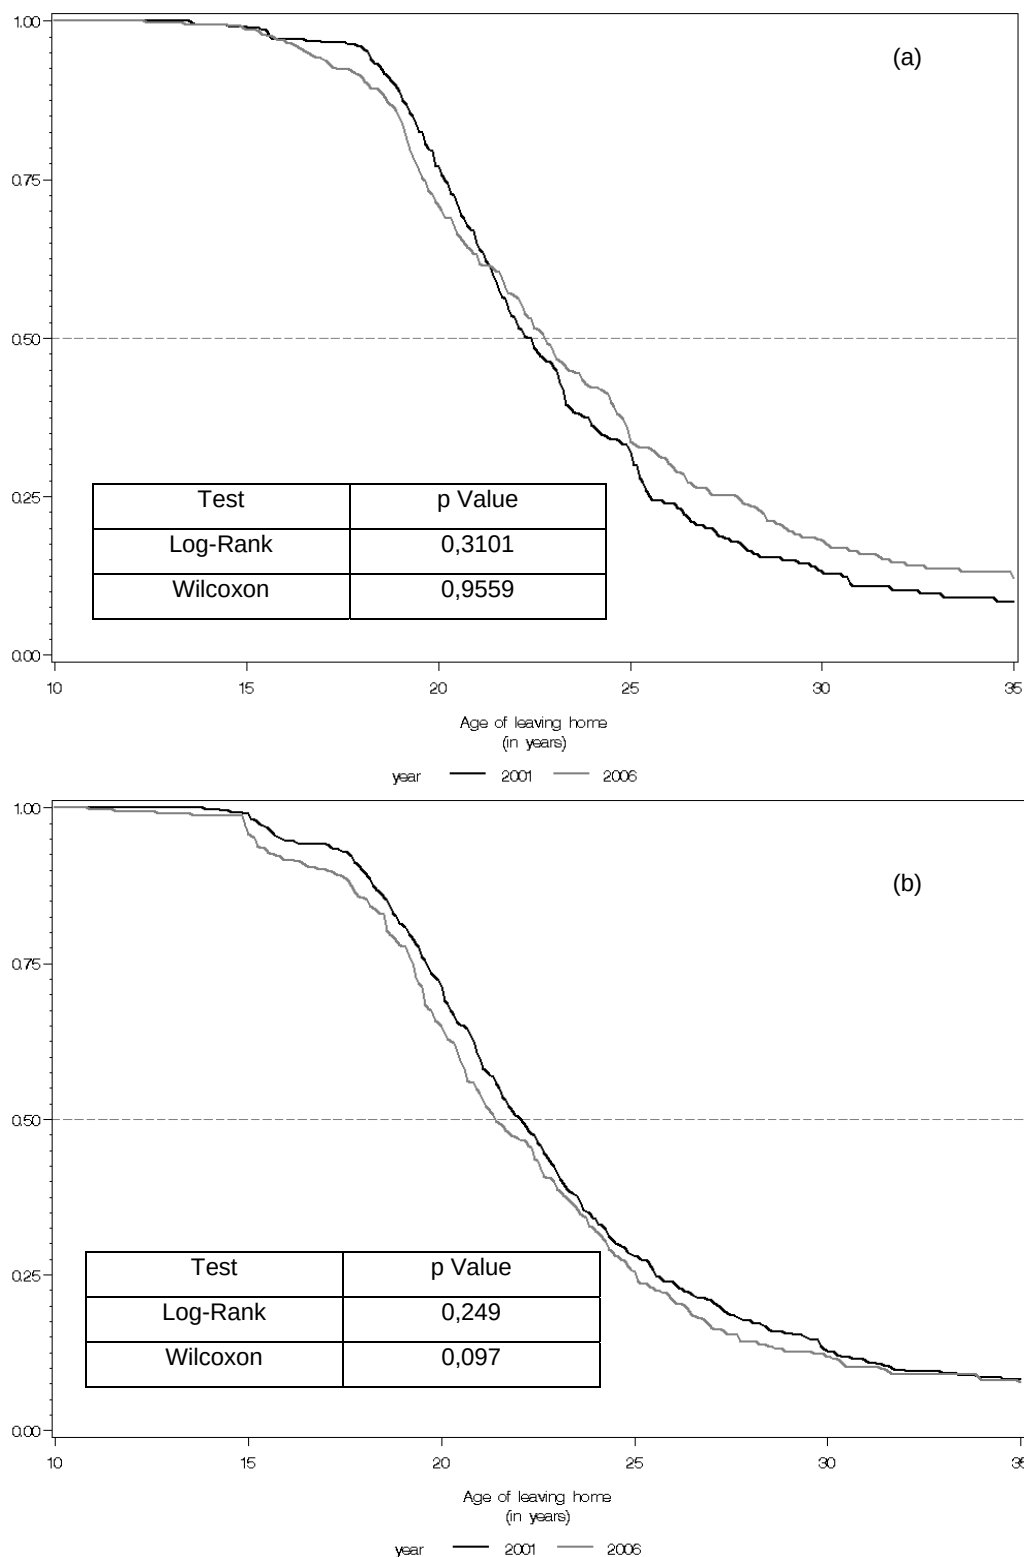

Figure 2. Survival functions – (a) females, (b) males

From the gender perspective, it can be stated that males are responsible for changes in the process of leaving the parental home in Poland. Median age shifted by 7 months within last 5 years and the share of no-leavers increased almost doubled: 9% in 2001 and 16% in 2006.

Model 3 – leaving the parental home broken down by number of siblings (chosen categories)

Figure 3. Survival functions – (a) respondents with 2 siblings, (b) respondents with 3 and more siblings

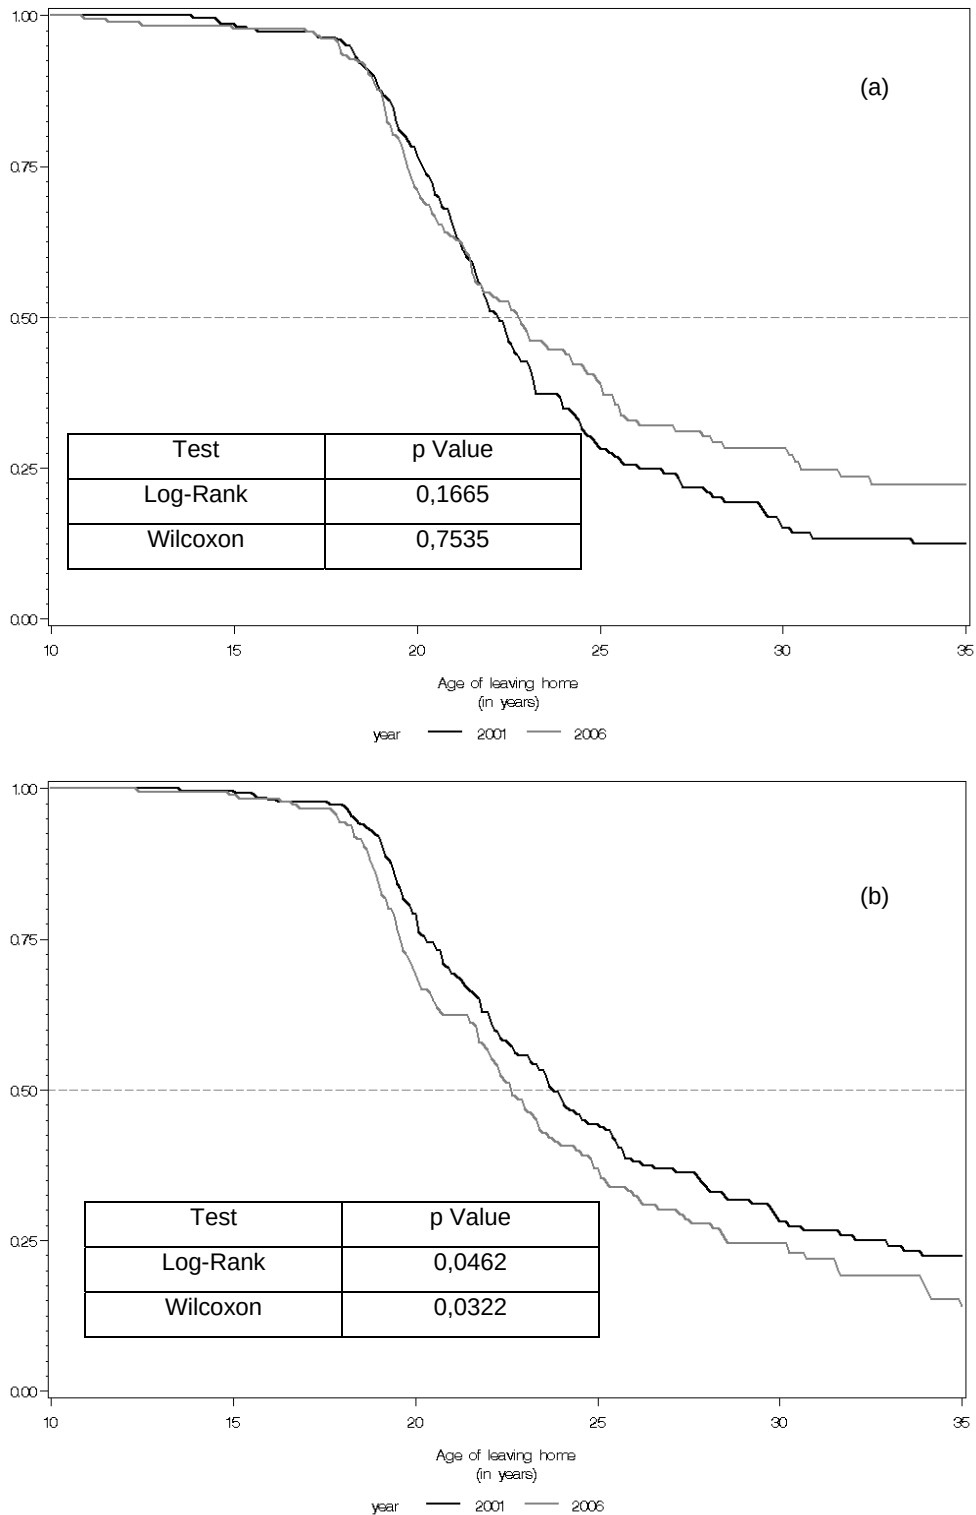

There are two opposite trends concerning the number of siblings. The shape of survival curves for people without siblings and with only one sibling remain the same. Some changes are observed in 2 others group. Especially among young people from numerous families.

Comparing year 2006 with 2001 the difference is around 9 months and according to Wilcoxon test is statistically significant.

Model 4 – leaving the parental home broken down by place of residence up to 15 (chosen categories)

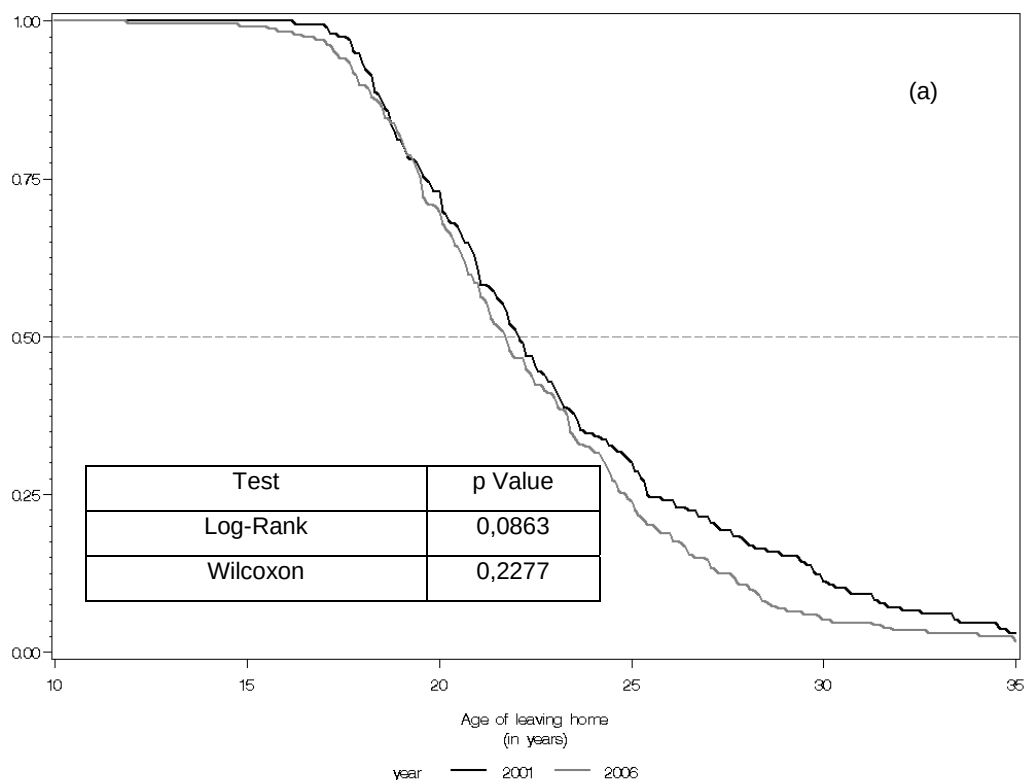

Figure 4. Survival functions – (a) city 100-200 thou. inhabitants, (b) city 20-100 thou. inhabitants

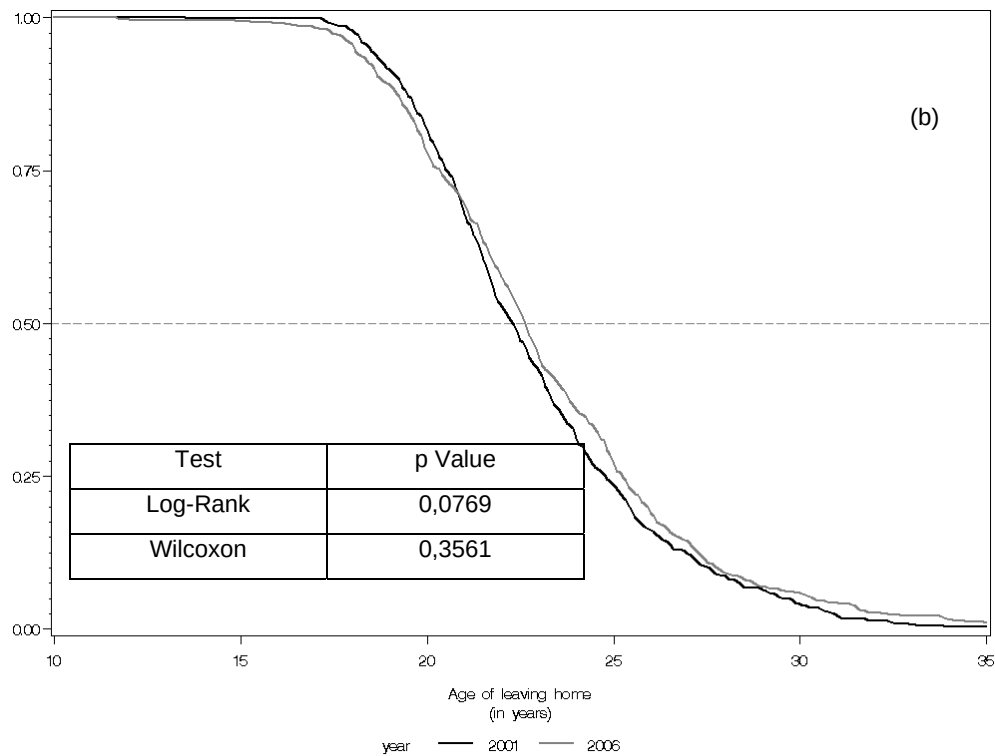

The place of residence has a very important influence on the timing of leaving the parental home. Within 5 years patterns in 2 kinds of cities were changed. In mid-size cities (100,000-200,000 inhabitants) the median age at leaving home did not change, but the share of people who never left their parental home increased significantly from 12% in 2001 up to 22% in 2006. Since these results are preliminary, it is too early to interpret such behaviour.

Model 5 – leaving the parental home broken down by the reason (chosen categories; only respondents who left their parental home)

Figure 5. Survival functions – (a) employment, (b) partnership formation

Generally, there is a significant variation within the reasons of home leaving. Respondents from 2006 survey who reported the partnership formation as a main cause, left home on average 4 months later than their counterparts from 2001. This phenomenon is in line with a general trend of delaying partnership formation itself. Opposite results are found among those who gave starting a new job as a main reason of departure from home. In this group the median age of leaving home in 2006 was by 7 months lower than in 2001.

The picture from nonparametric models shows that there is almost no differences. This is not surprising, because 5 years is a relatively short period of time in demography. Although the variation is very small, there are some phenomena that show us direction of future trends. More detailed analyses should give the answers for more specific questions and the better overview on changes, which took place during the socio-economic transformation in Polish society.

3. LOGISTIC REGRESSION

We will use the LOGISTIC procedure to estimate the models of logistic regression. The procedure allows to carry out all the necessary calculations and moreover, we can specify the data set, define the controlling parameters, as well as the form and the degree of precision of the results. Sequence is the simplest application of the LOGISTIC procedure.

```
proc logistic;  
model dependent variable = list of independent variables;  
run;
```

for example

```
proc logistic;  
model y = x1 x2;  
run;
```

LOGISTIC procedure can include many instructions written between the key words PROC LOGISTIC and RUN, but only the MODEL instruction is indispensable.

The explained variable Y adopts two different values (binary logistic regression), or is an ordering function (multistate logistic regression). It is only the binary regression that will be discussed here, hence Y can adopt two different values only (numerical or text). The values are ordered according to the specification included in the ORDER option of the procedure (assumed ascending or alphabetical orders). The lower value is interpreted as occurrence of *event*, while the higher - as nonoccurrence of the event (*nonevent*). Explanatory variables may be continuous, ordering or nominal variables. Nominal variables necessitate using the CLASS instruction and are then encoded in the form of many two-state variables.

Logistic regression model is estimated of the form:

$$P(Y = \text{event}) = \frac{1}{1 + e^{\beta_0 + \beta_1 X_1 + \dots + \beta_k X_k}} + \varepsilon \quad (1)$$

Maximum likelihood estimator was used to estimate the model.

Analysis of logistic regression was carried out for groups of males and females, separately. The universe included 602 males and 870 females.

The FREQ Procedure					
Sex					
B301R	Frequency	Percent	Cumulative Frequency	Cumulative Percent	
male	602	40.90	602	40.90	
female	870	59.10	1472	100.00	

The logistic model included only those persons who had finished 24 years of age at the moment of survey. Then, the gender-specific distribution looks as follows:

The FREQ Procedure				
Sex				
B301R	Frequency	Percent	Cumulative Frequency	Cumulative Percent
male	461	38.74	461	38.74
female	729	61.26	1190	100.00

B320 variable - having left (at least once) parental home by the respondent since they were 15 serves as explanatory variable. This variable can adopt one of the two values 'Yes', or 'No'.

Independent variables are:

NB00R – Respondent's age,

D02 – Did the relationship starts as a marriage?

B307R – Number of live born children by respondent's mother,

B309R – Number of years of the highest completed education,

B313R – Place of residence up to age 15,

B3061R – Symbol of the highest completed education level of respondent's father,

B312R – Living with parents up to age 15.

The last three variables are categorical. The distribution of variables for respondent's aged 24 and over is as follows:

The FREQ Procedure				
Place of residence up to age 15				
B313R	Frequency	Percent	Cumulative Frequency	Cumulative Percent
-2	41	3.45	41	3.45
urban 500 000 and more	327	27.48	368	30.92
urban 200 000-500 000	198	16.64	566	47.56
urban 100 000-200 000	133	11.18	699	58.74
urban 20 000-100 000	147	12.35	846	71.09
urban 20 000 and less	75	6.30	921	77.39
rural	269	22.61	1190	100.00

The FREQ Procedure				
Symbol of the highest completed education level of respondent's father				
B3061R	Frequency	Percent	Cumulative Frequency	Cumulative Percent
-2	44	3.70	44	3.70
tertiary	154	12.94	198	16.64
post-secondary	15	1.26	213	17.90
vacational secondary	211	17.73	424	35.63
general secondary	86	7.23	510	42.86
basic vocational	368	30.92	878	73.78
primary	293	24.62	1171	98.40
without school education	19	1.60	1190	100.00

Respondents with the unknown father's education (B3061R=-2) and with 'no education' (B3061R=7) were not included in calculations.

The FREQ Procedure					
Living with parents up to age 15					
B312R	Frequency	Percent	Cumulative Frequency	Cumulative Percent	
-----	-----	-----	-----	-----	
-2	28	2.35	28	2.35	
with both parents	1048	88.07	1076	90.42	
with father only	13	1.09	1089	91.51	
with mother only	84	7.06	1173	98.57	
neither of them	17	1.43	1190	100.00	

Respondents with the unknown living with parents up to age 15 (B312R=-2) were not included in calculations.

Three models have been constructed, which include all the mentioned quantitative variables. Qualitative variables are engaged in the following models: the first model includes the class of residence, the second model – education of respondent's father, and the third model – living with parents under 15 (finished) years of age.

Model 1

```
proc logistic data=pbr2006.example order=freq;

APPENDIX A

QUESTIONNAIRE: PART A, B, C

THE EVALUATION OF CHANGES IN ATTITUDES AND REPRODUCTIVE BEHAVIOURES OF YOUNG AND MIDDLE GENERATIONS FEMALE AND MALE POLES

Questionnaire A

Section 1. CHARACTERISTIC OF A HOUSEHOLD

1	Number of household	
2	Symbol of voivodeship	
3	Number of persons in a household for a day 31.12.2004 r.	
4	Number of persons in a household for a day 31.12.2005 r.	
5	Symbol of main source of maintenance of household	
6	Number of people in a household submitted to an individual interview	
7	Number of individual interviews on questionnaire B	
8	Number of individual interviews on questionnaire C	

9. Completion of an interview in a household

- interview was conducted
- interview was not conducted

1
2

10. Reasons for not completing an interview

One of variants should be chosen and its number should be circled

- nobody was present at home
- disintegrate of household, change place of residence
- the whole household was temporarily absent
- a household refused to participate in the survey
- a household was not able to participate in survey (illness, old age)
- it was a foreigners' household
- other reasons

1
2
3
4
5
6
7

Interviewer's remarks:

A history of visits in a households						
No of a successive visit	Date of a visit			Time of beginning of a visit (hour)	Duration of interview in minutes	Remarks
	day	month	year			
1			2006			
2			2006			
3			2006			

Prepared by: date

Chacked by: date

Section 2. HOUSEHOLD MEMBERS (FOR A DAY 31.12.2004 AND FOR A DAY 31.12.2005)

Rank no of person	Name of member of household <i>Please write name of each member of household, start from household head</i>	Date of birth			Sex 1 - male 2 - female (please to write right symbol)	Number of children		Relationship to household head 1- household head 2- wife-husband 3- partner 4- son-daughter 5- son-daughter (formal fostering) 6- foster child 7- father-mother 8- father-mother in law 9- son-daughter in law 10- brother-sister 11- grandfather-grandmother 12- grandson-granddaughter 13- unrelated	Marital status 1- maid/bachelor 2- married (formal) 3- widower (widow) 4- divorced 5- cohabiting 6- separated		
		day	month	year

10											
11											
12											
13											
14											

a) Status on 31.12.2004 or before arrival to the household. b) Status on 31.12.2005 or at time of departure from the household.

Section 3. ECONOMIC ACTIVITY OF HOUSEHOLDS MEMBERS AGED 15 YEARS AND OVER

Rank number of person	Source of maintenance		Have you been working as a employee, own-account worker or unpaid family worker for the last 7 days? 1 - yes 2 - no	Have you hold a job as a paid employee own-account worker or unpaid family worker for the last 7 days, while not performing it temporarily? 1 - yes 2 - no	What was the main character of your job? 1 work hired in manual position 2 work hired in non-manual position 3 work in private farm in agriculture 4 contributing employee farmer 5 employers 6 own-account work 7 contributing in own-account work	Was it a full time job? 1 - yes 2 - no	Ownership of the institution (firm) which is the main work place of a person 1 state-owned 2 municipal 3 private 4 private
	main	additional					
<i>Please to write down right symbol</i>							
1	2	3	4	5	6	7	8

Source of maintenance:

11 - income from work hired in manual position
12 - income from work hired in non-manual position
13 - income from work in private farm in agriculture
14 - income from contributing employee farmer

15 - employer
16 - income from own-account work
17 - income from contributing in own-account work
20 - retirement (similar) pension, veteran's pension

Section 4. EVENTS IN THE PERIOD OF 01.01.2005 TO 31.12.2005

[illegible]

a) Type of event:

1. Arrival to household:

- 01 marriage
- 02 cohabitation
- 03 come back after divorce
- 04 come back after separation
- 05 first arrival (arriving for the first time)
- 06 come back home
- 07 birth of child
- 08 adoption, formal fostering
- 09 fostering
- 10 others

2. Departure from household:

- 21 marriage
- 22 cohabitation
- 23 divorce
- 24 separation
- 25 emigration
- 26 education, work etc.
- 27 starting a separate household
- 28 death
- 29 others

3. Change of marital status:

31 marriage
32 cohabitation
33 widowhood
34 separation
35 divorce

b) Place of residence

- 1 urban (500.000 and more inhabitants)
- 2 urban (100.000-500.000 inhabitants)
- 3 urban (50.000-100.000 inhabitants)
- 4 urban (20.000-50.000 inhabitants)

5 urban (less than 20.000 inhabitants)
6 rural areas
7 abroad
8 doesn't apply

THE EVALUATION OF CHANGES IN ATTITUDES AND REPRODUCTIVE BEHAVIOURES OF YOUNG AND MIDDLE - AGED GENERATIONS: FEMALE AND MALE POLES

Questionnaire B FAMILY, OCCUPATIONAL AND MIGRATORY BIOGRAPHY

A. Number of household										
B. Number of person in household										
C. Number of husband (wife), partner in household										

Section 1. General data (to fill in after completion of interview)

1. Number of relationships, marriages		
2. How many children do you have?	1. own (live, birth, biological)	
	2. formal fostered	
	3. fostered	
	4. total	
3. Number of terms of education		
4. Number of terms of work or breaks from work		
5. Number of changes of formal place of residence from age 15		

Section 2. Completion of interview

1. Completion of an interview	• was completed	1
	• was not completed	2

2. Reasons for not completing an interview

One of variants should be chosen and its number should be encircled

• nobody was present at home (no contact)	1
• disintegrated household, change place of residence	2
• the whole household was temporarily absent	3
• household refused to participate in the survey	4
• household was not able to participate in survey (illness, old age)	5
• it was a foreigners' household	6
• other reasons	7

Prepared: date

Checked: date

Section 3. INFORMATION CONCERNING THE RESPONDENT, HIS (HER) SPOUSE (PARTNER) AND THEIR PARENTS

	Respondent	Husband (wife), spouse (partner)
01 Sex symbol 1-male 2-female		
02 Formal status of partner 1-husband (wife) 2-partner		
03 Date of birth	month	
	year	
04 Symbol of your mother's and your spouse (partner) mother's place of residence categories immediately before your (your spouse's /partner's) birth 1- urban (town of 500.000 and more inhabitants) 2- urban (200.000-500.000) 3- urban (100.000-200.000) 4- urban (20.000-100.000) 5- urban (20.000 and less) 6- rural 7- abroad		
05 Symbol of occupation performed in the main job for the longest period in life	1. father 2. mother	
06 Symbol of the highest completed education level	1. father	
1. tertiary 2. post-secondary 3. vocational secondary 4. general secondary	5. basic vocational 6. primary 7. without school education 2. mother	
07 Number of live born children by your (your spouse's /partner's) mother		
08 Symbol of the highest completed education level by you and your husband (wife), partner		
1. tertiary 2. post-secondary 3. vocational secondary 4. general secondary	5. basic vocational 6. primary 7. without school education	
09 Number of years of the highest completed education		

	Respondent	Husband (wife), spouse (partner)
10. Symbol of general current (latest) life situation (<i>write maximum two answers</i>) 1. employed 2. learning/studying 3. unemployed 4. not learning not studying	5. disabled pension, other maintenance unearned source of maintenance 6. maintained by partner 7. maintained by parents/parents-in-law 8. other	
11. Current (latest) maintenance source (<i>write two-digit symbol of maintenance source</i>)		
12 With whom did you live the longest time, up to the age of 15? 1-with both parents 2-with father only 3-with mother only 4- neither of them		
13 Where have you live the longest time up to age 15? 1- urban (500.000 and more) 2- urban (200.000-500.000) 3- urban (100.000-200.000) 4- urban (20.000-100.000) 5- urban (20.000 and less) 6- rural 7- abroad		
14 Are your , your wife's (husband's), partner's parents living together permanently? 1-yes 2-no, father (mother) died 3-not applicable, both parents died 4-no, other reason 5-I don't know my parents	→ 16	
6-no, they are separated 7-no, they are divorced	→ 15	
15. If parents are not together due to separation or divorce, when did it happen (month and year of divorce or separation) ?	1. month	
	2. year	

Questions 16-27 apply only to respondent

16 When you were growing up how long was your mother in paid employment? 1.Never in paid employment 2.Employed for less than half of the period 3.Employed for more of all that period 4.Did not grow up with my mother, mother died	
17 When you were growing up, what was your mother's main occupation? (write two-digit symbol of a job)	
18 Was your father employed when you were growing up? 1. I did not grow up with my father, father died 2. Father has never been in paid employment 3. Father was employed	
19 When you were growing up, what was your father's main occupation of your father? ((write two-digit symbol of a job)	

20. Have you ever left your (foster) parental home to start living on your own? 1-yes 2-no (please go to section 4)		
21. When did you first leave your parental home?	1. month	
	2. year	
22. What was the reason of leaving your parental home (permanently) for the first time? (write no more than 2 symbols)		
1.Education 2.Job 3.Start living on your own 4.Cohabiting with another person 5.Marriage 6.Going abroad 7.Family disagreement 8.Other family reasons 9.Other		
23. Did you start living in a different city, town or village than the residence place of your parent(s)? 1-yes 2-no		

24. Where did you live after leaving home for the first time? 1 - urban (town of 500.000 and more inhabitants) 2 - urban (200.000-500.000) 3 - urban (100.000-200.000) 4 - urban (20.000-100.000) 5 - urban (20.000 and less) 6 - rural 7 - abroad		
25. With whom did you live just after leaving home for the first time? 1 - Alone 2 - With a partner, spouse 3 - With a relative (other than partner) 4 - With unrelated person only (in a private household) 5 - In an institution (in dormitory, ect.) 6 - Other		
25. Did you ever returned to live at your parental home? 1-yes 2-no (please go to section 4)		
26A. If yes, when?	1. month	
	2. year	
27. What was the reason of your returning home ? 1 - Return after finishing (or not completing) education 2 - Disintegration of relationship, marriage 3 - Losing a job and source of incomes 4 - Return from abroad 5 - Problems with health and disability 6 - Climatic environmental reasons, 7 - Others		

11 – income from work hired in manual position
12 – income from work hired in non-manual position
13 – income from work in private farm in agriculture
14 – income from contributing employee farmer

15 – employer
16 – income from own-account work
17 – income from contributing in own-account work
20 – retirement (similar) pension, veteran's pension

26 – social benefits, unemployment benefits and other
27 – other source of incomes
40 – maintained by another person

WARSAW SCHOOL OF ECONOMICS – Institute of Statistics and Demographic, Al. Niepodległości 164, 02-554 Warsaw

THE EVALUATION OF CHANGES IN ATTITUDES AND REPRODUCTIVE BEHAVIOURES OF YOUNG AND MIDDLE GENERATIONS OF FEMALE AND MALE POLES

Questionnaire C

A Number of household

--	--	--	--	--	--	--	--	--	--

Section 1. RELIGIONS –VALUES AND NORMS

1. Which is your religious affiliation?

Please write name of affiliation

--

2. How important is religion in your life?

Please circle the number one answer

- | | |
|--------------------|---|
| • Very important | 1 |
| • Rather important | 2 |
| • Little important | 3 |
| • Not important | 4 |

3. How important would you say that religion was in your parent's life during your childhood and adolescence?

Please circle the number one answer separately for mother and father

for:	Very important	Important	Little important	Not important	Don't know
1. mother	1	2	3	4	5
2. father	1	2	3	4	5

4. How important would you say religion is in your life? I am a person:

Please circle the number one answer

- | | |
|--|----|
| • Very religious and regular churchgoer | 1 |
| • Religious and regular churchgoer | 2 |
| • Religious but do not attend church regularly | 3 |
| • Religious but do not attend church | 4 |
| • Indifferent | 5 |
| • Non-believer | 6 |
| • Not religious but attached to religious tradition | 7 |
| • Not religious but attended church because of social pressure | 8 |
| • A convinced atheist | 9 |
| • I don't know | 10 |

5. How often do you attend religious services?

Please circle the number one answer

- | | |
|---|---|
| • More than once a week | 1 |
| • Regularly on Sundays and holidays | 2 |
| • Once a month or less often | 3 |
| • Only Christmas and Easter | 4 |
| • Once a year or less often | 5 |
| • Occasionally at the time of baptism, weddings, funerals etc | 6 |
| • Does not apply, non-believer | 7 |

B Number of persons in a household

--	--

6. Now we will present two statements concerning people's view on the right and the wrong. Which one is the closest to you?

- A. There are entirely clear criteria defining what is right and what is wrong. They must be followed regardless of any circumstances.
- B. There are no clear and absolute criteria defining what is right or wrong. The right and the wrong depends strongly on circumstances. Please circle number one answer

- | | |
|-----------------------------------|---|
| • I agree with statement A | 1 |
| • I agree with statement B | 2 |
| • I disagree with both statements | 3 |
| • I cannot say | 4 |

7. What guides you in solving moral conflicts?

Please choose and circle the number no more than 3 answers

- | | |
|---|---|
| • Church rules | 1 |
| • Advice of my family | 2 |
| • My own conscience | 3 |
| • Generally accepted principles of behavior | 4 |
| • Advice of priests/e.g. confessors/ | 5 |
| • Advice of my friends | 6 |
| • Other, please specify:..... | 7 |

8. What is the most meaningful for human life?

Please choose and circle the number no more than 3 answers

- | | |
|---|----|
| • Love, deep emotion | 1 |
| • Gaining people's trust and finding friends | 2 |
| • Finding one's own place in society and feeling of being useful and needed | 3 |
| • Family happiness | 4 |
| • Parenthood | 5 |
| • Money, welfare, comfortable life and good material position | 6 |
| • A job which you like | 7 |
| • Deep religious faith | 8 |
| • Following some permanent truth of one's own life | 9 |
| • Living a quiet life without any surprises | 10 |
| • Something else makes a meaning of human's life, please specify: | 11 |

8a. Which of the answers to question 13 is the most important for you?

Please write the number of answer from question 8

--

9. What are you most afraid of in your life?

Please choose and circle the number of no more than 5 answers

- Loosing health, disability 1
- Unsuccessful marriage..... 2
- Loosing someone close..... 3

APPENDIX B
CLASSIFICATIONS
AND GROUPING APPENDIXES

Appendix 1

Symbol of main source of maintenance of household socio-economic group of household

1. Employees' households

Exclusive or main (prevailing) source of maintenance is income from hired work either the public or private sector. Additional sources of income for this group of households may include old age pension, others type of pensions or any unearned income, self-employment (excluding a private farm in agriculture) or free profession. The income gained from the additional sources is lower than the income from hired work.

2. Employee-farmers' households

Exclusive or main (prevailing) source of maintenance is joint income from hired work and on an used private farm in agriculture. Additional sources of maintenance for this group of households may include old age pension, others type of pensions or any unearned income, self-employment or free profession. The income gained from the additional sources is lower than that gained from hired work and the private farm in agriculture together.

3. Farmers' households

Exclusive or main (prevailing) source of maintenance is income from an used private farm in agriculture. Additional sources of maintenance may include old age pension, others type of pensions or any other unearned income, self-employment outside a private farm in agriculture, or free profession. The income gained from the additional sources is lower than that obtained from the private farm in agriculture together.

4. Households of the self-employed

Exclusive or main (prevailing) source of maintenance is self-employed outside an used private farm in agriculture or free profession. Additional sources of maintenance for this group of households may include hired work, individual farm, agricultural plot, old age pension, others type of pensions or any unearned income. The income gained from the additional sources is lower than that gained from self-employed outside the private farm in agriculture.

5. Retirees' households

Exclusive or main (prevailing) source of maintenance is old pension. Additional sources of maintenance may include other than pension unearned income, e. g. income from property, social benefits, gifts, hired work, an used private farm in agriculture, self-employed outside the private farm in agriculture or free profession. The income gained from the additional sources is lower than that from old pension.

6. Pensioners' households

Exclusive or main (prevailing) source of maintenance is other types of pension. Additional sources of maintenance may include other than old pension unearned income, e. g. income from property, social benefits, gifts, hired work, an used private farm in agriculture, self-employed outside the private farm in agriculture or free profession. The income gained from the additional sources is lower than that from other type of pension.

7. Households living on unearned sources

Exclusive or main (prevailing) source of maintenance is provided by unearned income other than old age pension or another type of pension, such as unemployment benefits, social benefits, alimonies, donations, income from property or income from hiring (leasing) houses or building constructions not related to own business activity. Additional sources of maintenance can be provided by hired work, old age pension or another types of pension, self-employment, free profession or a private farm in agriculture.

Appendix 2

Symbol of division of national economy according to Polish Classification of Activity

Symbol	Description
01	Agriculture and hunting, include services activities
02	Forestry, include services activities
05	Fishing, include services activities
10	Mining of coal and lignite; extraction of peat
11	Extraction of crude petroleum and natural gas, include services activities
12	Mining of uranium ores
13	Mining of metal ores
14	Other mining and quarrying
15	Manufacture of food products and beverages
16	Manufacture of tobacco products
17	Manufacture of textiles
18	Manufacture of wearing apparel and furriery
19	Processing of leather and manufacturing of leather products
20	Manufacture of wood and wood products
21	Manufacture of pulp and paper
22	Publishing and printing
23	Manufacture of coke, refined petroleum products and nuclear fuel
24	Manufacture of chemical products
25	Manufacture of rubber and plastic products
26	Manufacture of other non-metallic mineral products
27	Manufacture of basic metals
28	Manufacture of metal products except machinery and equipment
29	Manufacture of machinery and equipment, other manufacturing
30	Manufacture of office machinery and computers
31	Manufacture of electrical machinery and apparatus, other manufacturing
32	Manufacture of radio, television and communication equipment and apparatus
33	Manufacture of medical, precision and optical instruments, watches and clocks
34	Manufacture of motor vehicles, trailers and semi-trailers
35	Manufacture of other transport equipment
36	Manufacture of furniture; other manufacturing
37	Recycling
40	Electricity, gas, steam and hot water supply
41	Collection, purification and distribution of water

Symbol	Description
45	Construction
50	Sale, service and repair of motor vehicles and motorcycles; retail sale of automotive fuel
51	Wholesale and commission trade, except trade of motor vehicles and motorcycles
52	Retail trade, except sale of motor vehicles and motorcycles; repair of personal and households goods
55	Hotels and restaurants
60	Land and pipeline transport
61	Water transport
62	Air transport
63	Auxiliary transport activities; tourism organisation
64	Post and telecommunications
65	Financial intermediation, except insurance end pension funding
66	Insurance end pension funding
67	Activities auxiliary to financial intermediation and insurance
70	Real estate activities
71	Renting of machinery and equipment without operator and of personal and household goods
72	Computer
73	Science
74	Other business activities
75	Public administration and defence; obligatory social insurance
80	Education
85	Health and social work
90	Sewage and refuse disposal, sanitation and similar activities
91	Activities of membership organisations
92	Recreational, cultural and sporting activities
93	Other service activities
95	Private households with employed persons
99	Extra-territorial organisations and bodies

Appendix 3

Symbol of main occupational group. Classification according to two digits symbol of occupational group

Symbol	Description
11	Legislators, politicians, senior officials
12	Managers of large corporations
13	Managers of small and medium companies
21	Physical, mathematical and engineering science professionals
22	Life science and health professionals
23	Teaching professionals
24	Other professionals
31	Physical and engineering science associate professionals
32	Life science and health associate professionals
33	Basic vocational teachers and instructors
34	Other associate professionals
41	Office clerks
42	Customer services clerks
51	Personal and protective services workers
52	Models, salespersons and demonstrators
61	Skilled agricultural and fishery market oriented workers
62	Skilled and self-employed agricultural and fishery workers
71	Extraction and building trades workers
72	Metal, machinery and related trades workers
73	Precision, handicraft, printing and related trades workers
74	Other craft and related trades workers
81	Stationary plant and related operators
82	Plant and machine operators
83	Drivers and mobile plant operators
91	Sales and services elementary occupations
92	Agricultural, fishery and related labourers
93	Labourers in mining, construction, manufacturing and transport
99	Professional soldiers

Appendix 4

Symbols for coding answer to question 1, Questionnaire C, Section 1 (Which is your religious affiliation?)

Code	Description
1	Roman-Catholic
2	Orthodox
3	Protestant
4	Other
5	No religious affiliation
